Executive Summary

In 2018, the HIV prevalence was 2.4% as against that of 2.1% in 2017 amongst pregnant women attending Antenatal Care (2018 HIV Sentinel Survey Report, May 2018). To reduce the incidence of HIV in the country, the Programme developed and began the implementation of an Advocacy, Communication and Social Mobilization plan and collaborated with other partners to address HIV-related stigma and human rights abuses.

One Million, seven hundred and two thousand, five hundred and forty-three (1,702,543) out of a target of 2,635,050 persons were tested for HIV in 2018, representing 65% target coverage, the highest in the last five years. Approximately 20% were males, 29% were non-pregnant women, and the remaining 51% were pregnant women. Of those tested 72,291 were found positive, giving a testing yield of 4.2%, the lowest in the last five years.

From a total of 1,184,574 expected pregnancies in 2018, 73% (867,263) were offered HIV testing and received their results. Thirteen thousand, five hundred and fifty (13,550) out of those tested were HIV positive (1.6%), and 11,236 (83% of positives) were provided ARVs to Prevent Mother-To-Child Transmission of HIV (PMTCT). Nine thousand, five hundred and forty-nine (9,549) of the 13,550 expected

HIV Exposed Infants (HEI) received Early Infant Diagnosis (EID), giving a 70% nucleic acid testing coverage and 7% (682) of them were positive at six weeks.

Thirty thousand, four hundred and ten (30,410) adults and children were initiated on ART in 2018 with females forming 71% (21,711). As of December 2018, a total of 113,171 clients were on treatment, a decrease from the 2017 figure due to the rebasing that was done in June 2018. One hundred thousand clients were due for viral load testing as at December 2018, out of which 54,538 tests were performed and 36,226 found virally suppressed. With the estimated 334,713 persons living in Ghana in 2018 (Spectrum Estimates 2018), the 90-90-90 status for the country was 55-61-66.

During the year, NACP organized training for health care workers in early infant diagnosis, family testing, ART, differentiated service delivery, TB preventive therapy, and HIV testing. The TB/HIV Collaboration continued, and in 2018, the number of PLHIV who were screened for TB symptoms was 75,191. There were 1,171 HIV positive clients with TB on ART. Guidelines for TB Preventive Therapy in Ghana were also developed by a joint TB/HIV task team.

Under the Cooperative Agreement between the Ghana Health Service and the

United States Centers for Disease Control and Prevention (CDC), the Programme established three centers of excellence for viral load testing in the Greater Accra, Ashanti and Brong Ahafo regions of the country with the placement of high through-put PCR machines purchased by the Global Fund. The National AIDS/STI Control Programme would sustain collaboration with other Divisions and Programmes, i.e. the NTP, FHD, and PPME to ensure more integrated service delivery.

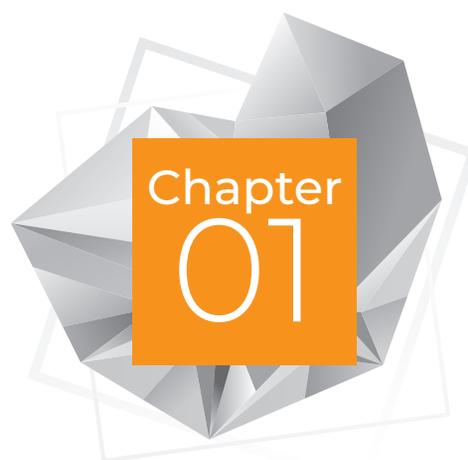

The Programme is appreciative of all the support from the DG-GHS, Director PHD, MOH, GAC, Development Partners, other government & non-governmental stakeholders, service providers and the association of PLHIV. Our focus is to work together until we attain zero new infections, AIDS-related deaths, stigma, and discrimination.

Dr. Stephen Ayisi Addo
Programme Manager

Introduction

The National AIDS/STI Control Programme (NACP) is a Division under the Disease Control and Prevention Department of the Public Health Division of the Ghana Health Service (GHS). The Programme started as a National Technical Committee on AIDS, later became the National Advisory Council on HIV and AIDS in 1985 and the National AIDS/STI Control Programme (NACP) in 1987. The Programme has since been the lead agency in the health sector's response to HIV and AIDS in Ghana. The NACP is responsible for implementing the health sector aspects of the National HIV and AIDS Strategic Plan (NSP 2016-2020). Additionally, Programme interventions are guided by the Health Sector Programme of Work and the current Health Sector HIV Strategic Framework (2016-2020).

1.1 Programme Mandate and strategies

The National AIDS/STI Control Programme is empowered to:

1. Deliver a package of interventions to reduce HIV transmission.
2. Provide care and support services for Persons Living with HIV (PLHIV).
3. Deliver Strategic Information on HIV/ AIDS and other STIs.
4. Provide essential technical support to all Ministries, Departments, and Agencies (MDAs) in the implementation of their HIV programmes.

The strategies used to deliver each mandate have been outlined in table 1-1.

Table 1-1: NACP Mandates and their respective strategies

MANDATE	STRATEGIES
<p>Deliver a package of interventions to reduce HIV transmission.</p>	<ul style="list-style-type: none"> • Targeted HIV Testing Services for General & Key Population and index client/family based testing. • Elimination of Mother-To-Child Transmission (EMTCT) services. • Syndromic management of Sexually Transmitted Infections. • Condom promotion. • Ensuring Safe Blood Transfusion. • HIV Exposure Prevention in the Health Care setting and provision of post-exposure prophylaxis to vulnerable groups. • Health Promotion and Demand Creation for all HIV services.
<p>Provide treatment, care and support services for Persons Living with HIV (PLHIV).</p>	<ul style="list-style-type: none"> • Prevention and Management of Opportunistic Infections. • Provision of Anti-retroviral therapy and differentiated service to all diagnosed persons. • Continuous Supportive Counselling to persons living with HIV (PLHIV). • Provision of Home-Based Care to PLHIV. • Working with PLHIV and their associations. • Greater involvement of Persons Living with HIV and AIDS (GIPA).
<p>Deliver Strategic Information on HIV/AIDS and other STIs.</p>	<ul style="list-style-type: none"> • The conduct of annual HIV Sentinel Surveillance. • Development of information, education and communication materials. • Undertake and support individuals, groups and institutions to Conduct HIV research to inform policy and implementation within the national response e.g. AIDS Case Surveillance, Behavioural Sentinel Surveillance, DHS etc. • Dissemination of HIV information to all stakeholders. • Publication of annual reports to all stakeholders. • Issuance of quarterly news bulletins.
<p>Provide essential technical support to all Ministries, Departments, and Agencies (MDAs) in the implementation of their HIV programs</p>	<ul style="list-style-type: none"> • Providing technical support to the Ghana AIDS Commission and other stakeholders. • Assisting MDAs to develop and deploy HIV workplace policy and programmes. • Strengthening the institutional capacity of MDAs to provide HIV services.

1.2 Leadership and Governance

At the national level, the Programme Manager is responsible for the coordination and management of the health sector response to HIV and reports to the Director General of Ghana Health Service through the Director of Public Health. At the Sub-national level, the Programme has a decentralized leadership and governance structure, with the national office working closely with the Regional Health Directorates, who also support the districts and facilities in services delivery. Figure 1-1 provides the administrative structure for NACP at the National level.

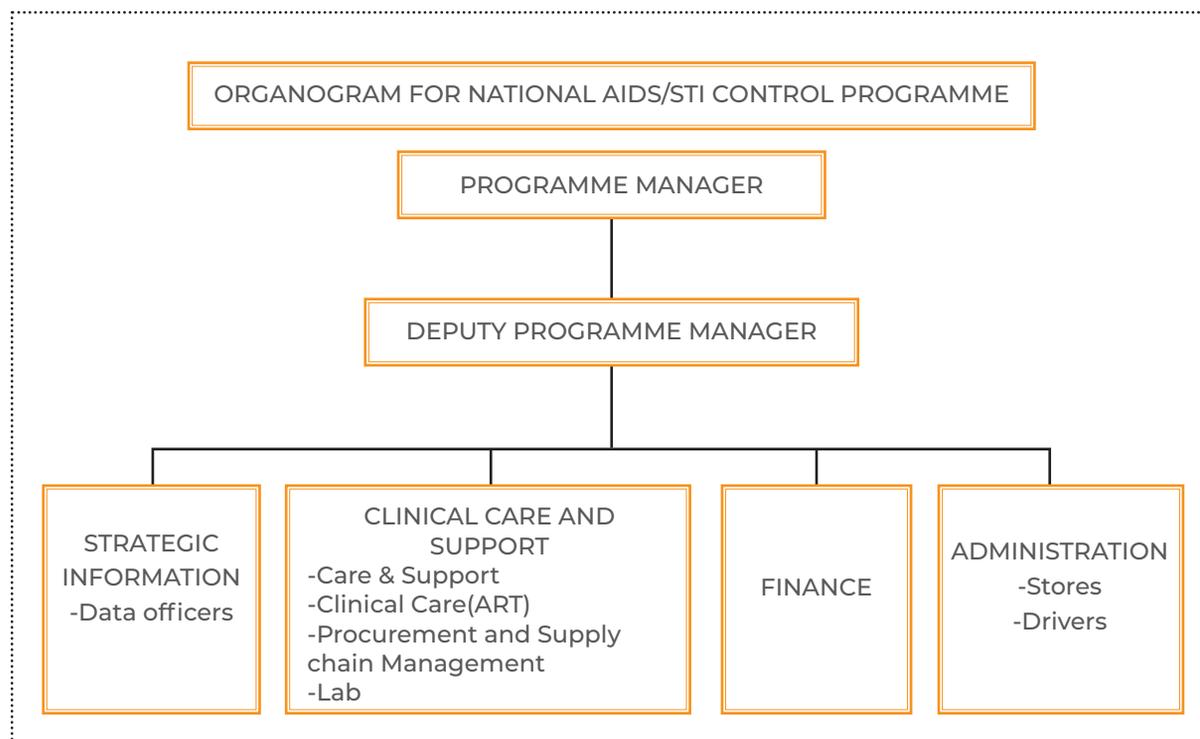

Figure 1-1: Organogram for NACP at the National Level

1.3 Programme Units and Human Resource

The Programme Manager is supported at the national office by technical officers and administrative staff within the following units:

1. Clinical Care and Support
2. Strategic Information
3. Finance and
4. Administration

With the addition of two Doctors and one National Service Personnel, the staff strength of the Programme at the national office stood at 39 as at December 2018 (Appendix 3). In addition, there were 223 data officers across facilities in all ten regions.

1.4 Technical and Financial Support

To achieve its programmatic targets, the NACP is supported by

1. The Resource Mobilisation Unit of Ministry of Health
2. The Programme Support Unit and health facilities under Ghana Health Service.
3. Health facilities under the Christian Health Association of Ghana (CHAG)/other Private and Quasi-Government Facilities.
4. The National Public Health Reference Lab (PHRL) and the Noguchi Memorial Institute for Medical Research (NMIMR) that provide diagnostic and Technical Support for the Programme.
5. Regional Health directorates in all 10 administrative regions as at December 2018.
6. The National HIV Technical Working Group, Paediatric HIV Task team and Differentiated Service Delivery Task Team who support planning, implementation and monitoring of Programme activities.

The Government of Ghana's financial commitment to HIV Control in 2018 was complemented by donor support for capacity building and logistic supply from

1. The Global Fund
2. PEPFAR
3. CDC
4. UNICEF
5. WHO
6. UNAIDS
7. USAID.

1.5 Strategic Information (SI)

The NACP works in collaboration with Policy, Planning, Monitoring and Evaluation (PPME) Division of the Ghana Health Service to track all HIV activities in the country. Dedicated officers at the NACP SI Unit help with the provision of baseline, process and outcome indicators as well as set targets and timelines for the country's HIV Programme. The SI Unit utilizes data collected at the facility level using HTC, ART, ANC & maternity registers, PMTCT summaries as well as patient files and cards and captured as aggregate data in the District Health Information System (DHIMS 2). In addition to these, the Unit also supports the conduct of surveys and collects qualitative data from Programme activities and implementing partners. It also leads in the generation of manuscripts and abstracts for publication.

1.6 HIV Service Coverage

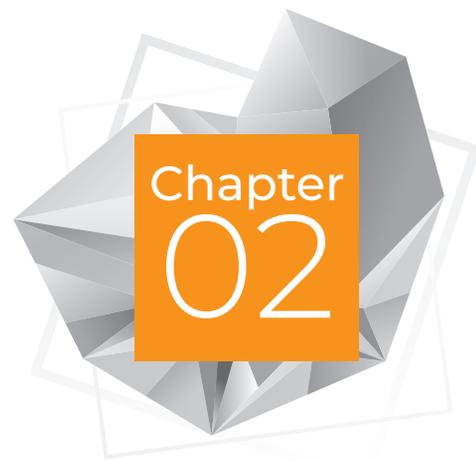

A total of 3,750 facilities were providing Elimination of Mother to Child Transmission (eMTCT) services as at December 2018, with the Eastern Region having the highest number (619). Out of the 592 facilities where samples were taken for early infant diagnosis, the majority (112) were in the Upper East Region with the least being in the Eastern region. Three thousand, seven hundred and seventy-five (3,775) facilities were offering HIV testing and Counselling Services to clients as at December 2018, with a quarter of them (1,016) located in the Eastern region of Ghana. Three hundred and thirty facilities offered antiretroviral therapy to clients in 2018, with most of them located in the Ashanti Region. Table 1- 2 provides a summary of the coverage of the various services across the regions.

Table 1-2: Availability of Services across regions

REGION	ANC PROVIDING EMTCT SERVICES	ART	HTS	EID
Ashanti	453	60	459	92
Brong Ahafo	293	45	179	57
Central	289	21	354	26
Eastern	619	55	1016	23
Greater Accra	330	51	198	49
Northern	509	24	498	54
Upper East	340	16	296	122
Upper West	181	8	196	89
Volta	347	25	262	51
Western	389	25	317	29
Total	3,750	330	3,775	592

Apart from the Upper West Region, the other nine regions have machines for viral load and DNA PCR testing. Three new state of the art viral load testing machines with high capacity were installed in the Greater Accra, Ashanti and Brong Ahafo regions, making them Centers of Excellence. These centers are also meant to help mop up the backlog of samples from other regions to reduce the turnaround time for the various investigations. Details of the various facilities can be found in appendix 2.

Interventions to Reduce HIV Transmission

To reduce the incidence of HIV in the country in 2018, the Programme undertook the following interventions:

1. Advocacy, Communication and Social Mobilisation
2. Addressing HIV-related Stigma and human rights abuses
3. HIV Testing and Counselling Service
4. Elimination of Mother to Child Transmission interventions
5. Condom distribution and STI Management
6. Blood safety
7. Post-exposure prophylaxis.

2.1 Advocacy, Communication and Social Mobilisation (ACSM)

To guide its primary prevention efforts, the Programme developed an ACSM plan, with several strategies aimed at ensuring that by 2020, there will be

- a. an Increase in safer sexual behaviour and demand for HIV prevention, care and treatment services by 50%.
- b. a reduction in HIV incidence among vulnerable and key populations by 50%.

To achieve this, the plan outlines several time-bound activities involving the engagement of key stakeholders including Civil Society Organisations, the Ministry of Education/Ghana Education Service, faith-based organizations and traditional leaders among others. These activities were selected to be in line with the Ghana HIV Prevention Road Map.

As part of the ACSM activities, the Programme provided education to the general public at Joy FM and Multimedia TV station, TV3, UTV, Obonu FM, Unique FM and 3FM in 2018. Though the stations are all located in the Greater Accra Region, their presence online and on digital satellite platforms widened the coverage for the messages. The Programme also had an agreement with the Seventh Day Adventist Church to provide prevention

messages on its airwaves. In 2019, there shall be more of such collaborations with other public, private and faith-based media outlets. Service providers in the regions shall also be encouraged to undertake and report on such media engagements in their local context. The Programme shall also undertake a massive social media campaign with the support of the Health Promotion Division of Ghana Health Service, to increase awareness and create demand for testing and other prevention services.

2.2 Addressing HIV-related Stigma and Human Rights Abuses

Human rights abuses remain a significant challenge to HIV prevention efforts globally. In Ghana, these abuses are particularly rife among the key populations, adolescent girls and young women. To address the stigma within health facilities, NACP supported the West African Program to Combat AIDS and STI (WAPCAS) to convert Ghana's patient charter into infographics to make it accessible to clients and thus increase knowledge of it. The Programme again worked with CEPERG to develop anti-stigma posters to be shared on social media platforms and posted in health facilities to promote the creation of stigma-free zones in them.

The NACP, with the support of the John Snow International (JSI) Care Continuum project, has added capacity building on stigma reduction towards key populations and their management in health care settings to its curriculum for the staff being trained to provide ART. The Programme also joined Ghana AIDS Commission and other stakeholders to engage the Inspector General of Police on reducing the incidence of human right abuses towards key populations, especially the female sex workers.

2.3 HIV Testing and Counselling Services (HTS)

HTS serves as the entry point to antiretroviral treatment and helps to prevent new infections and re-infection in the general population. In 2018, the Programme routinely offered HIV Testing and Counselling (HTC) services to persons who wanted to know their status and learn more about HIV and AIDS to make informed decisions about their sexual and reproductive health.

2.3.1 Orphanage Testing:

Following a situational analysis conducted by the Programme with support from UNICEF in 2014, which showed a relatively large gap in paediatric HIV treatment compared to adults, a National Acceleration Plan for Paediatric HIV Services (2016-2020) was developed. As part of recommendations in this plan and with the aim of ensuring early identification of orphans living with HIV in Ghanaian orphanages, the Programme, with support from UNICEF and the Global Fund, undertook free HIV screening in orphanages within the Greater Accra and Ashanti Region. This was done in collaboration with the Department of Social Welfare under the Ministry of Gender, Child and Social Protection. The two regions were purposively selected because data from the Department showed that the majority of registered orphanages in the country were found in those regions. The testing was done in 41 out of the 47 orphanages in the regions.

Out of the 1,836 children and 256 orphanage staff tested, figure 2-1 provides the treatment status of those diagnosed. Whilst the majority (15 out of 19) of the children found positive were already on treatment, only 2 out of the 8 staff diagnosed were on treatment. All newly diagnosed persons were successfully linked to care and counselled on infection prevention and control within their settings.

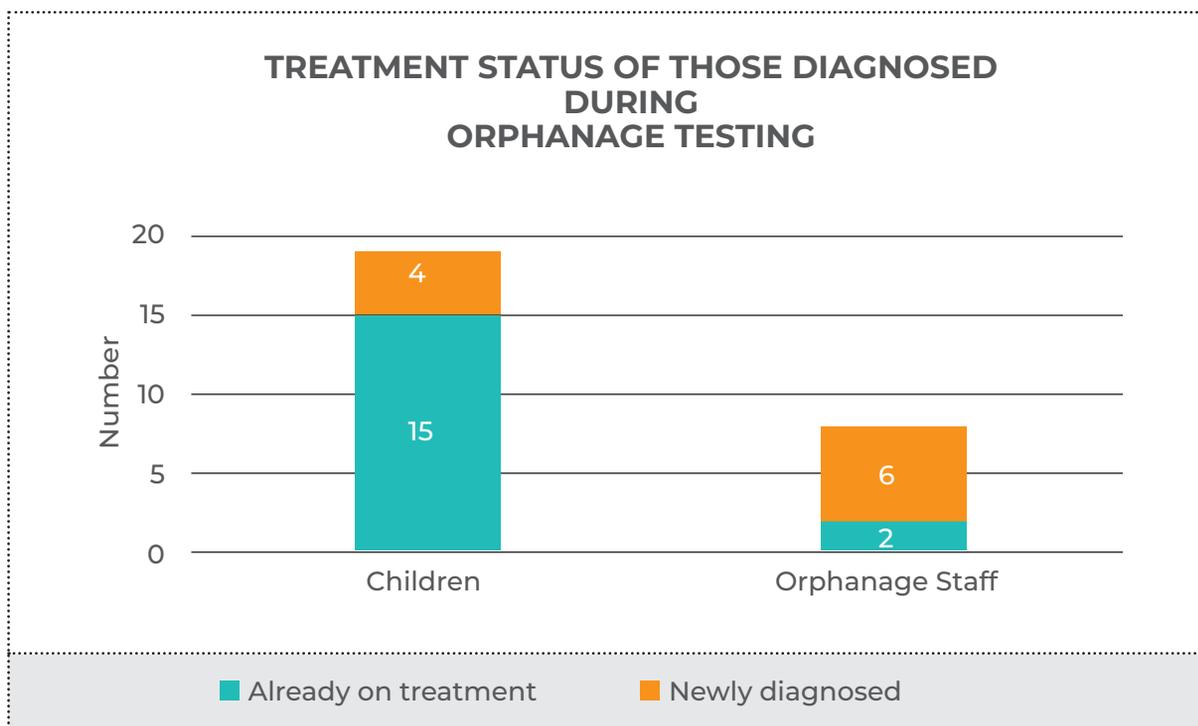

Figure 2-1: Treatment status of those diagnosed during orphanage testing

2.3.2 HIV Testing Coverage

One Million, seven hundred and two thousand, five hundred and forty-three (1,702,543) out of a target of 2,635,050 were tested for HIV in 2018, representing 65% target coverage, the highest in the last five years (figure 2-2). The regional coverage of the testing targets is captured in figure 2-3. Fifty-one percent (51%) of those tested were pregnant women, with men tested being the least (figure 2-4). It is hoped that the operational research being conducted by the Research Division of Ghana Health Service to assess barriers to male involvement in HIV testing will provide some innovative solutions. By age, most (93%) of those tested were more than 15 years. (figure 2-5)

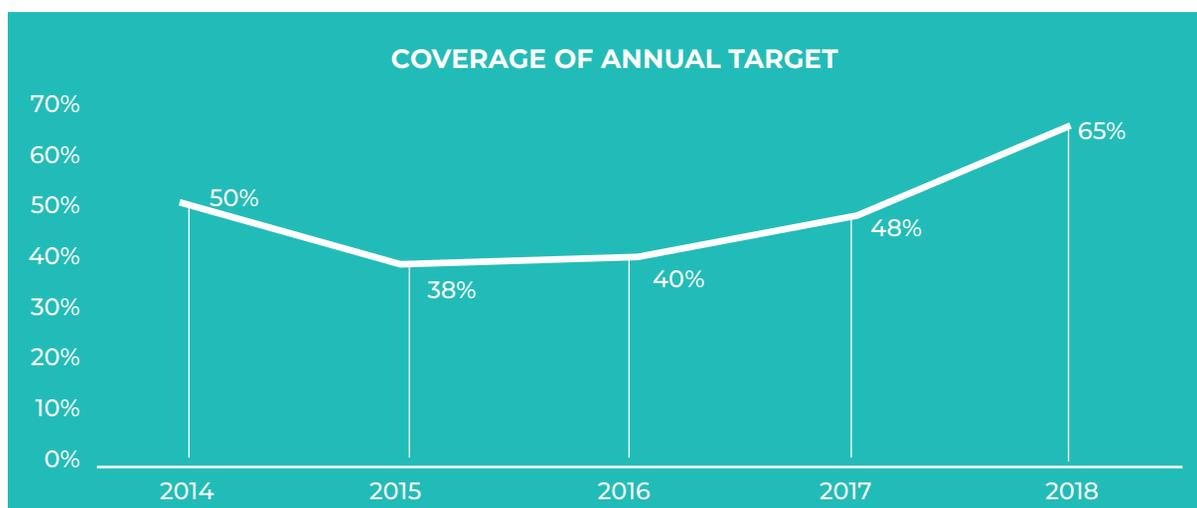

Figure 2-2: Trend in Coverage of annual HIV testing targets

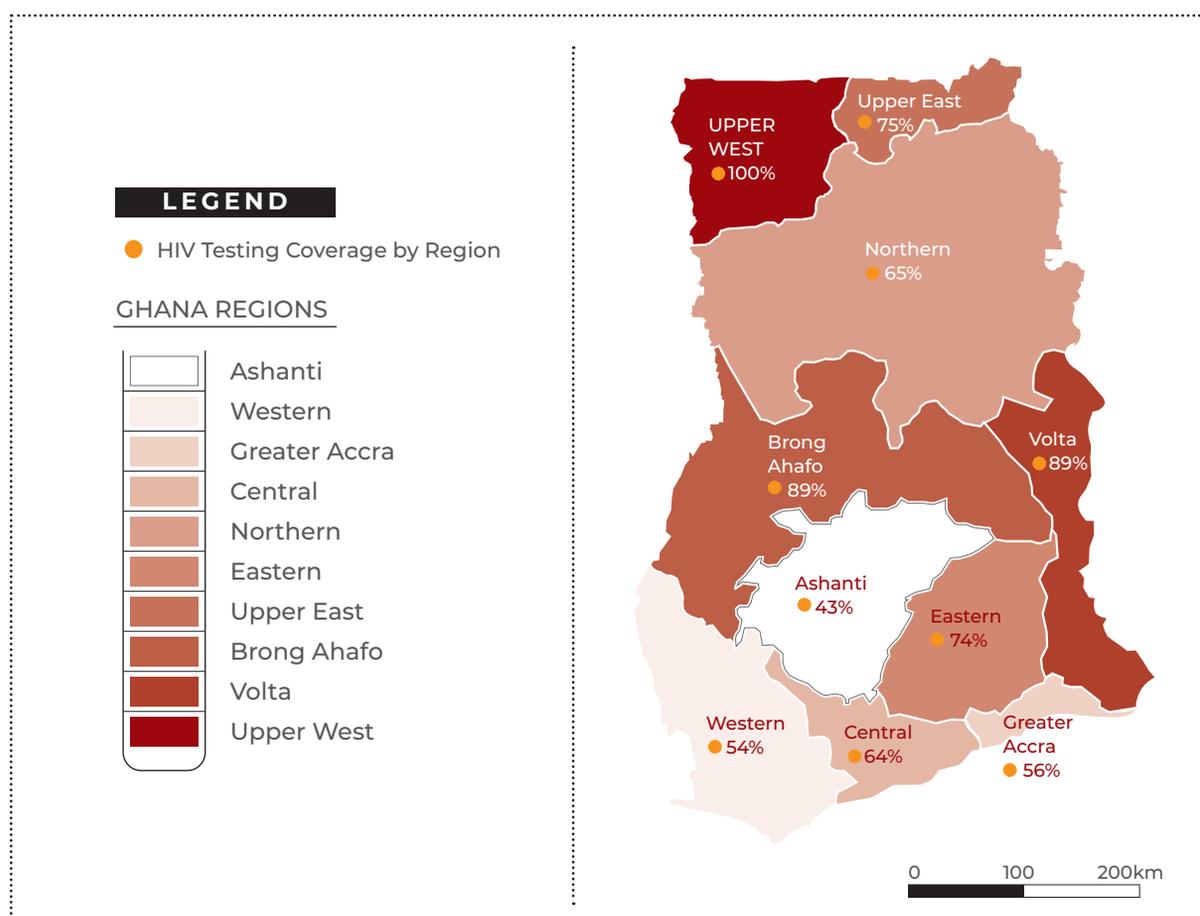

Figure 2-3 HIV testing coverage by region - 2018

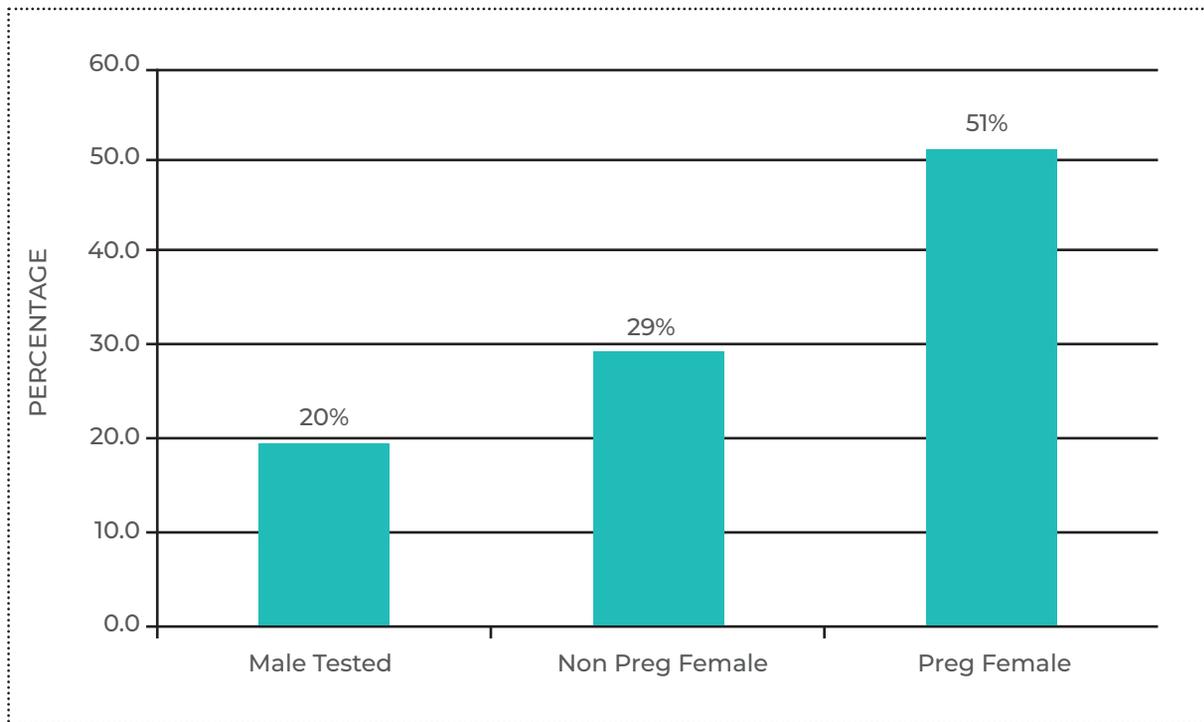

Figure 2-4 Percentage of categories of persons tested -2018

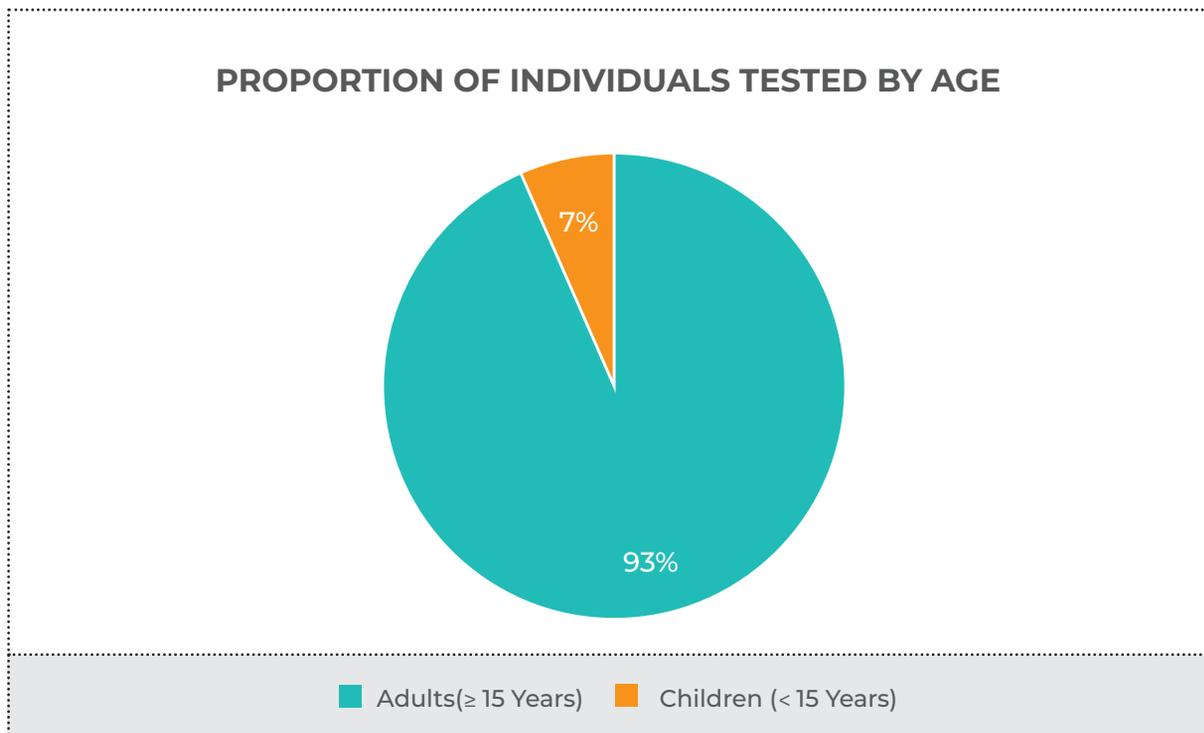

Figure 2-5: HIV Testing by age- 2018

2.3.3 HIV Testing Yield

Among those tested, a total of 72,291 persons were found positive in 2018, 94% (67,842) of whom were more than 15 years. The numbers positive translate into a yield of 4.2% from all those tested in the year, the lowest in the last five years (figure 2-6). Due to the poor health-seeking behaviour of men, the yield among males has been consistently higher than that in females in the last five years but is also seeing a downward trend (figure 2-6). Out of the 112,741 children tested, 3.9% (4,449) were found positive, while 4.3%(67,842) of the 1,589,802 adults tested were found positive. The regional distribution of these figures can be found in tables 13-1 and 13-2 in appendix 1.

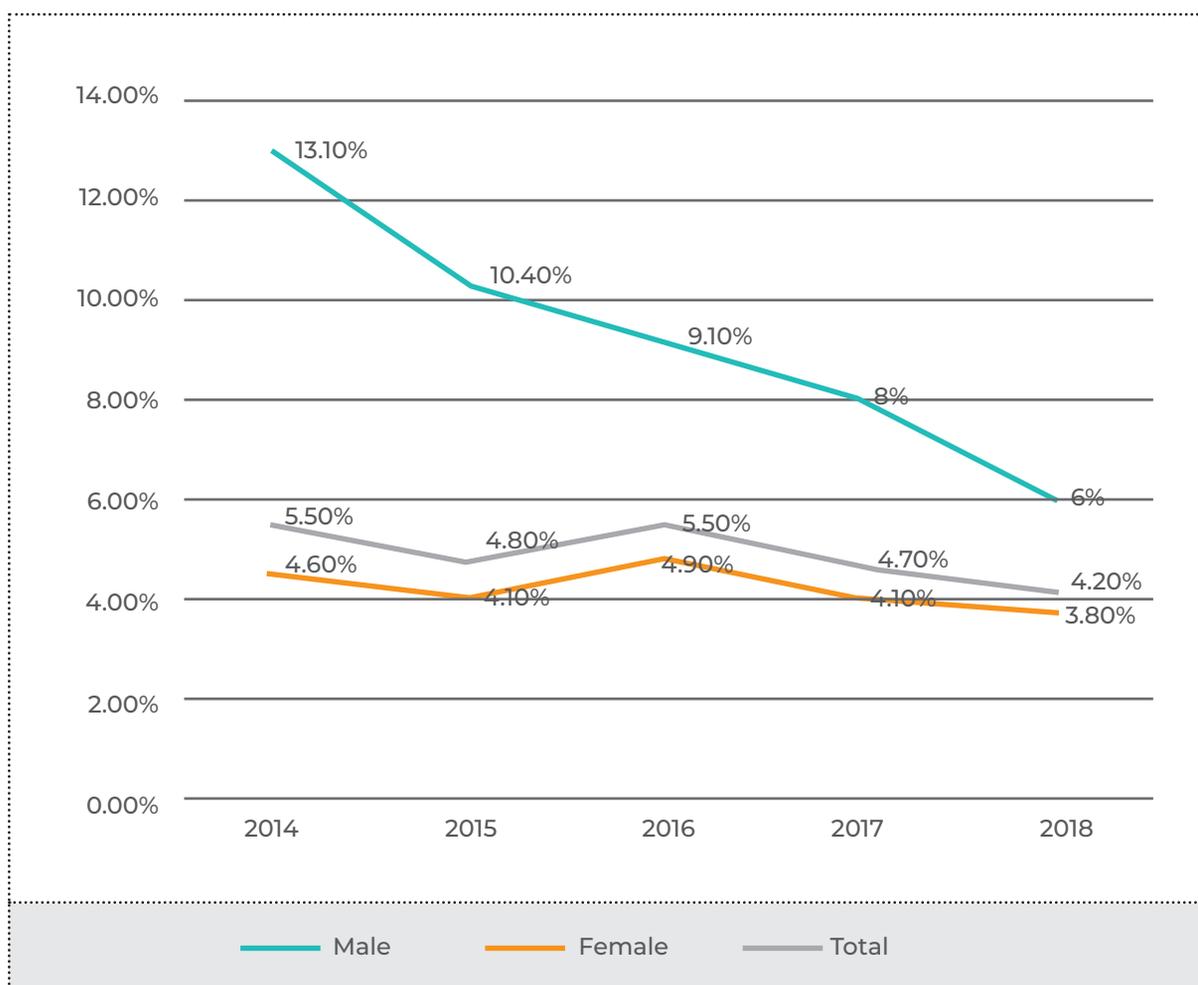

Figure 2-6 Testing yield by Gender 2018

2.4 Elimination of Mother to Child Transmission

Elimination of Mother-to-Child Transmission (EMTCT) continues to be the flagship programme that integrates Sexual and Reproductive Health (SRH) and HIV services for women and infants and provides an opportunity to expand male participation in SRH and HIV services. Below is a catalogue of activities undertaken in 2018 to achieve this, in addition to the primary prevention activities highlighted earlier.

2.4.1 Prevention of Unintended Pregnancies in HIV positive women

Ghana's PMTCT guidelines recommend the prevention of unintended pregnancies among women in fertility age, living with HIV to have them virally suppressed, or at least on treatment before pregnancy. To achieve this, the Programme liaised with the Family Health Division of the Ghana Health Service and provided Family planning (FP) services as part of ANC at all service delivery points. Women seeking PMTCT services also got family planning services and were catered for or linked to services where necessary during the ante-natal and post-natal periods. HIV positive non-pregnant women were also referred for family planning services. The Family Health Division has detailed data on the provision of Family Planning at its Reproductive and Child Health Unit (RCH).

2.4.2 HIV testing at Antenatal Care Units

Early diagnosis and initiation of HIV positive pregnant women on ARVs are key in the efforts to achieve the elimination of Mother to Child Transmission (eMTCT). The EMTCT guidelines, therefore, recommend that all pregnant women are tested for HIV at registration and at 34 weeks if the earlier test is negative.

HIV Testing Coverage at ANC

Out of a total of **1,184,574** expected pregnancies in 2018, 73% (867,263) were offered HTS (figure 2-7), the highest in the last two years. Of those who actually assessed ANC services in 2018, 92% were offered HTS, the highest coverage in the last five years.

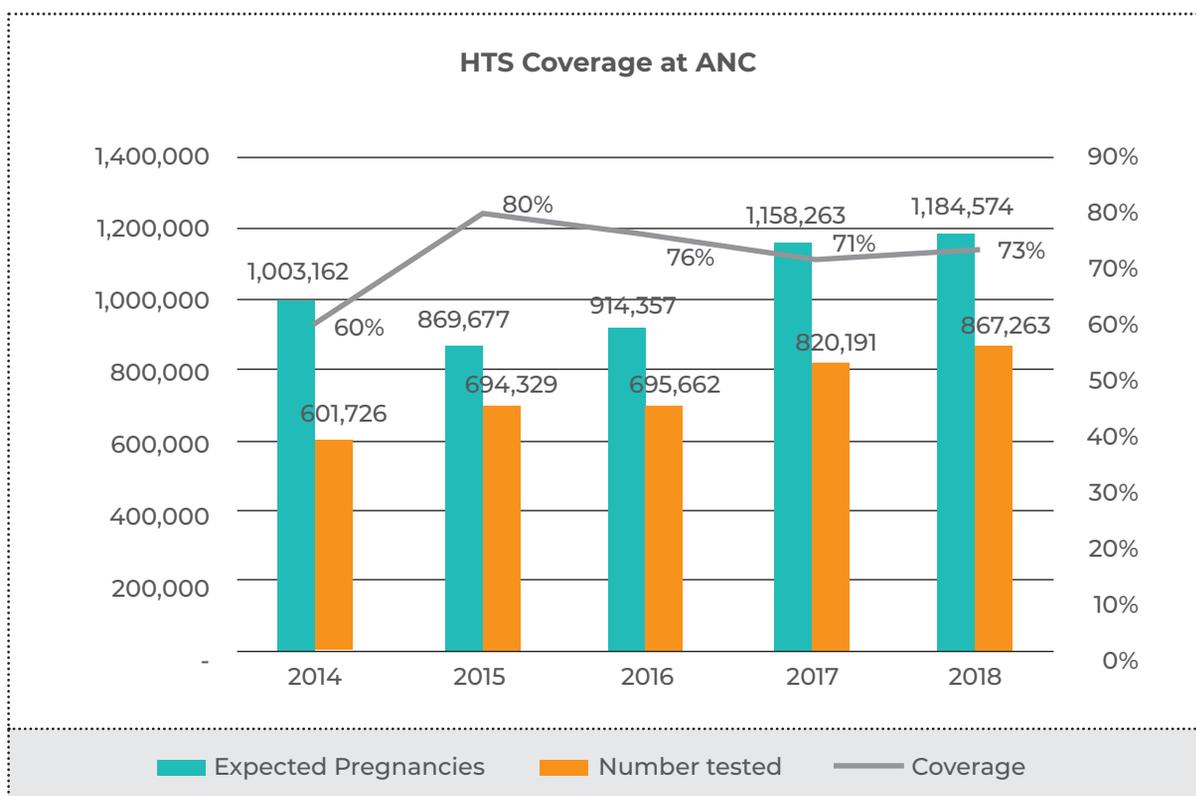

Figure 2-7 Trend in HTS Coverage for ANC

HIV Testing Yield at ANC

Of the pregnant women tested, 13,550 were found positive, giving a yield of 1.6%, the lowest since 2014 (figure 2-8). Figure 2-9 gives the ANC testing yields across the regions, with the lowest (0.4%) and the highest (2.1%) being from the Northern and Brong Ahafo Regions respectively.

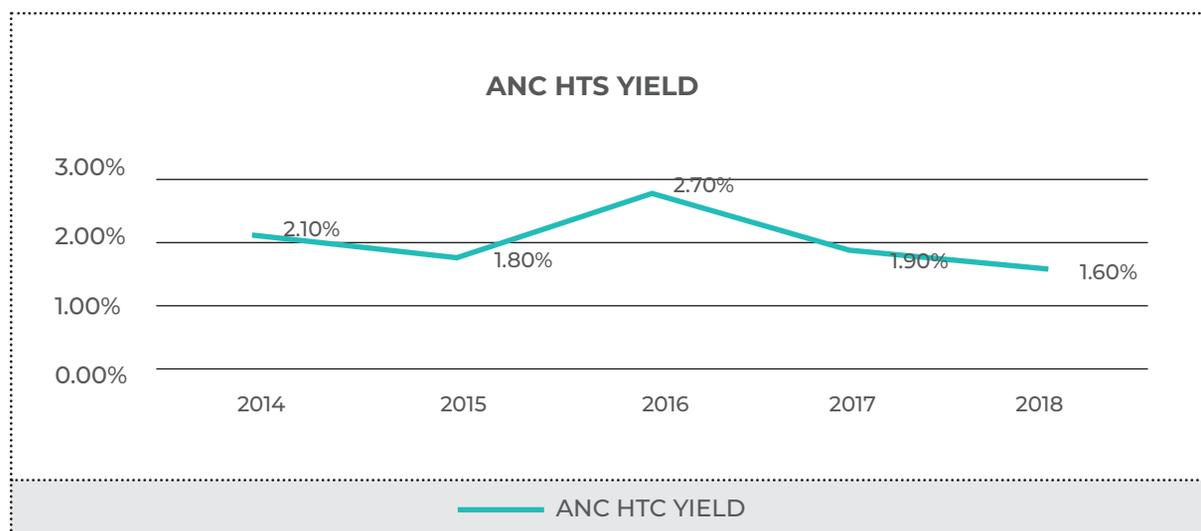

Figure 2-8 Trend in ANC HTS yield

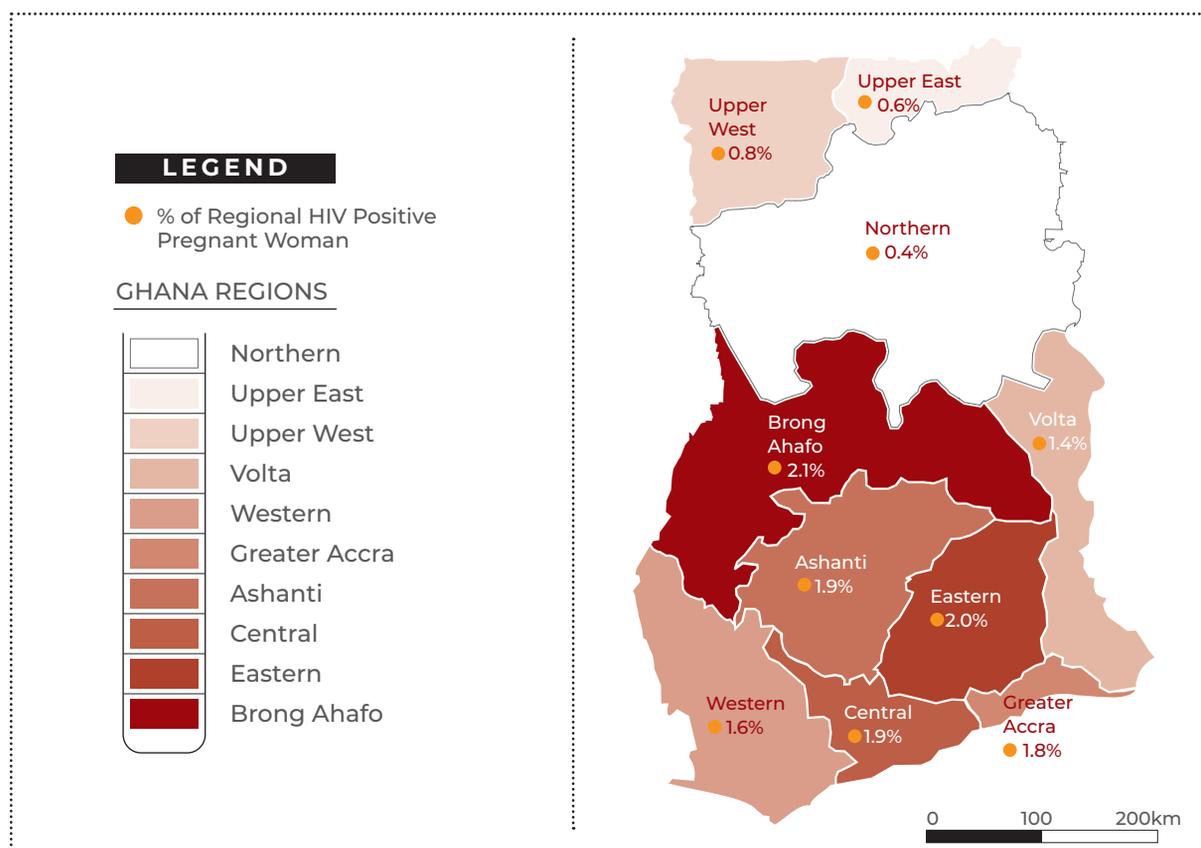

Figure 2-9 Regional distribution of ANC testing yield

2.4.3 Provision of ARVs to HIV Positive Pregnant Women

Provision of ARVs to HIV positive pregnant women reduces their viral loads and their risk of transmitting the infection to the foetus. Ghana adopted the policy of using combination antiretroviral therapy for PMTCT in 2006 and updated its protocol in 2010 to lifelong triple ARVs for HIV positive pregnant women to further reduce Mother-to-Child Transmission (MTCT) rates. From the 13,550 HIV positive pregnant women, 11,236 were offered ARVs, giving a coverage of 83%, the highest in the last five years.

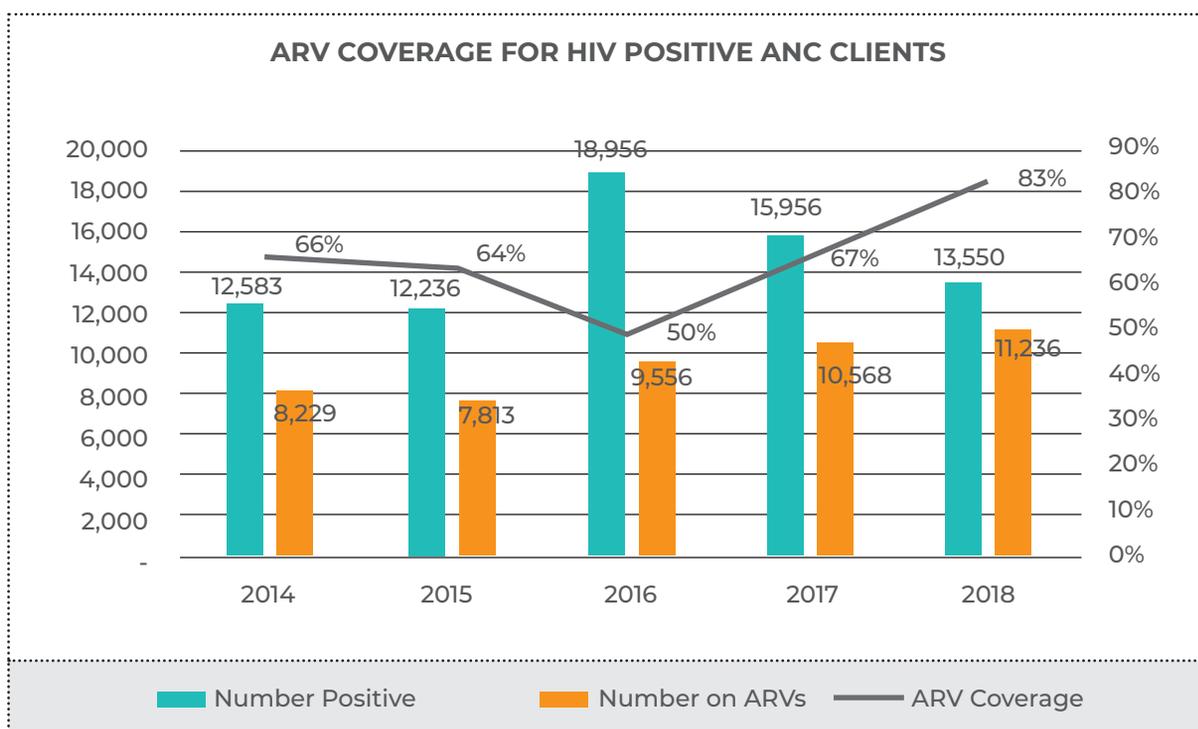

Figure 2-10 Trend in ARV Coverage among HIV positive ANC clients

2.4.4 Provision of Treatment, Care and Support Services for Mothers, their Infants, and Families

Post-natal care, family planning, breastfeeding, and other nutritional support, as well as child welfare services, were offered to HIV positive mothers and their infants at service delivery points for continued care. Due to the rapid course of HIV in infected new-borns, WHO recommends the performance of Nucleic Acid Testing (NAT), using Dried Blood Spot (DBS) samples collected from HIV exposed infants at specified ages below 18 months for early infant diagnosis and provision of ARVs when the infant is found positive.

Nucleic Acid Testing and Yield for Early Infant Diagnosis

From the 13,550 HIV exposed infants delivered in 2018, 70% (9,549) received nucleic acid testing (NAT) for HIV by the 6th week of life (figure 2-11). Due to the increase in the number of staff trained in DBS sample collection and the introduction of testing in the first week of life, NAT coverage at 6 weeks has seen a significant rise since 2014 (figure 2-12).

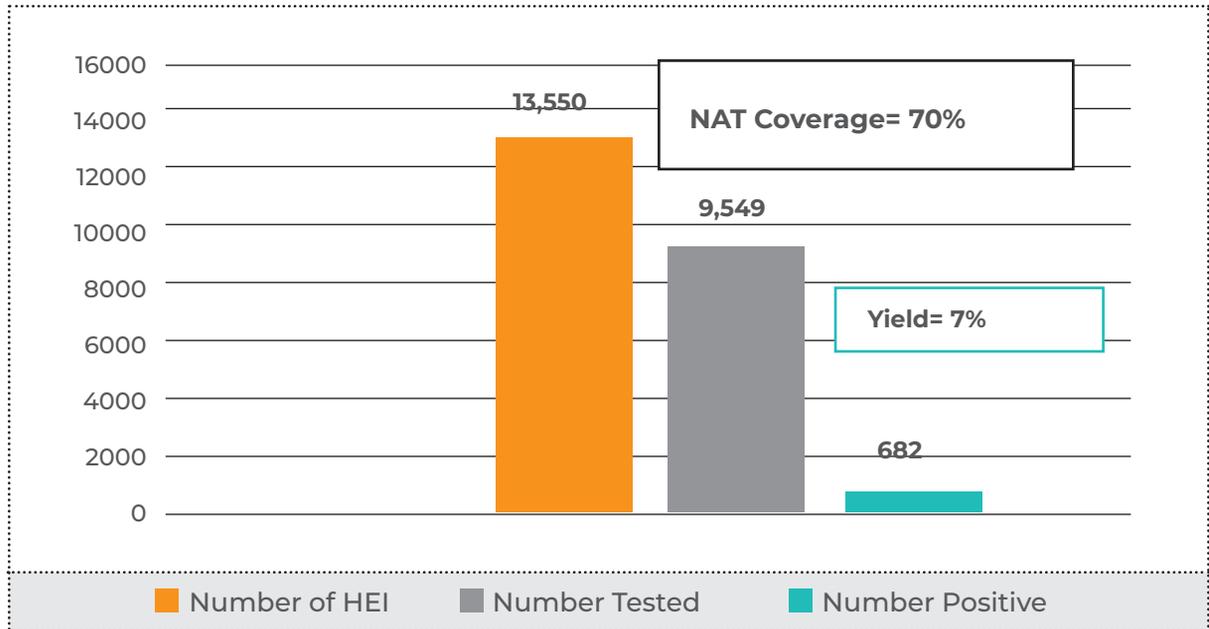

Figure 2-11 Nucleic acid testing coverage (2018)

Six hundred and eighty-two (682) of the HIV exposed infants tested at 6 weeks in 2018, were positive giving a transmission rate of 7% as projected by the 2017 spectrum estimates (fig 2-13). Though the rate is projected to decline, the transmission has consistently been higher in the first six weeks of life since 2014 (fig 2-13). The regional breakdown of the tests performed, and their yield can be found in table 13-3.

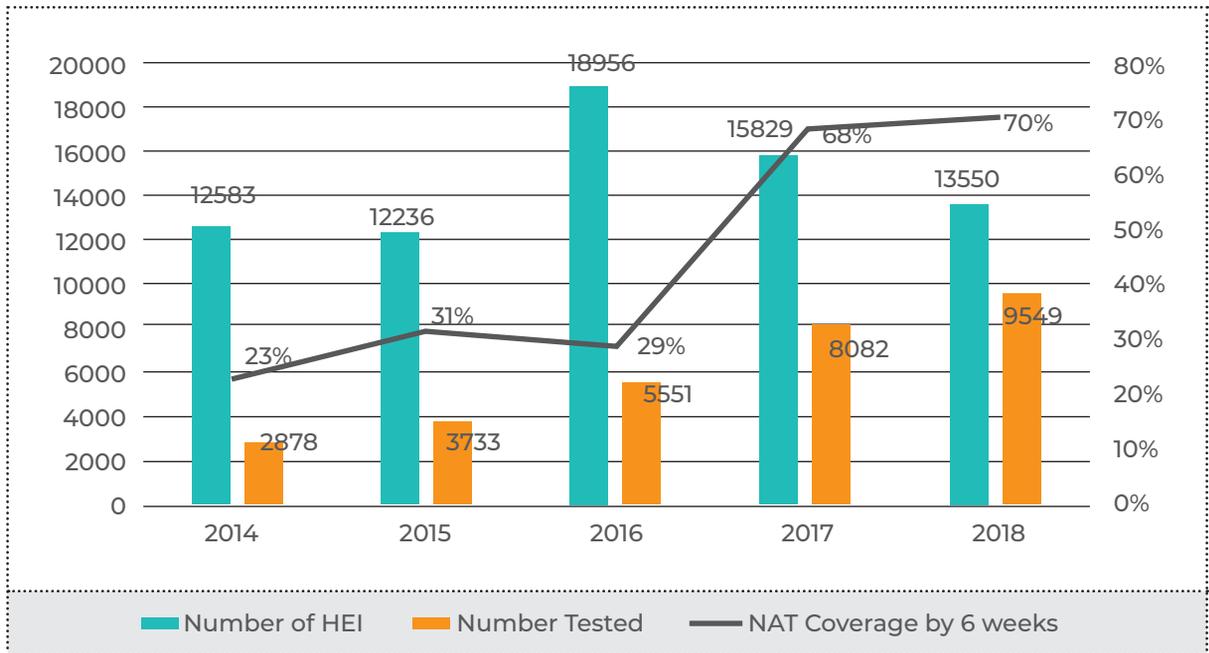

Figure 2-12 Trend in NAT coverage at 6 weeks

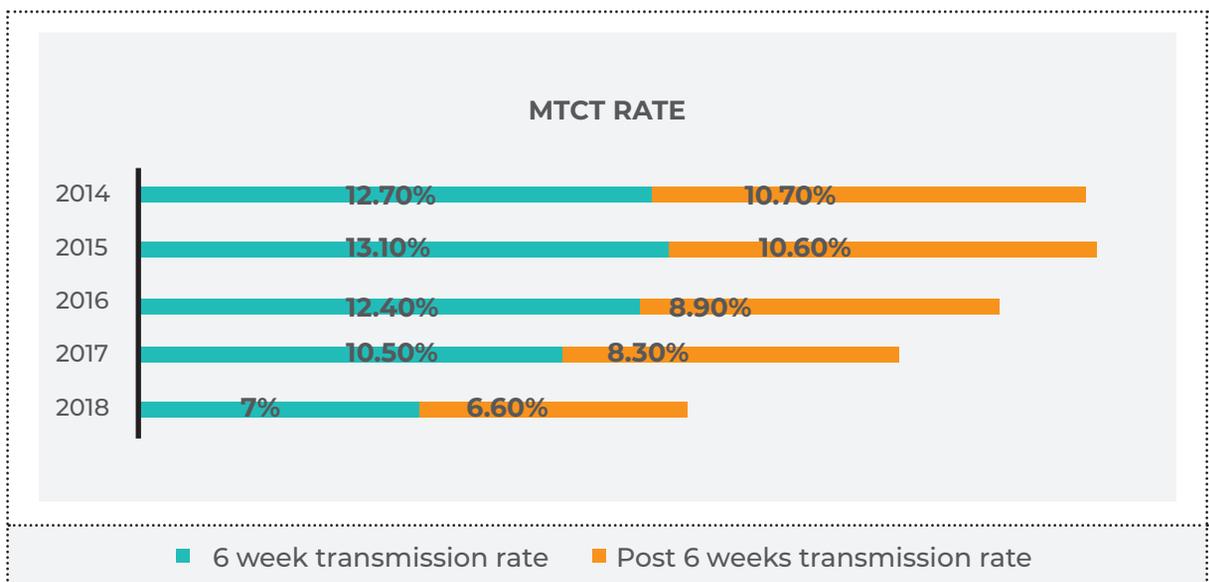

Figure 2-13 Trend in PMTCT rate. SPECTRUM EPP Outputs, March 2019

2.4.5 Syphilis testing at ANC

One of the strategies recommended by WHO for the elimination of Mother to Child Transmission of HIV and prevention of congenital syphilis is the testing of all pregnant women at their first antenatal care visit for syphilis and management of those found positive. Out of the 496,665 pregnant women tested in 2018, 13,668 were found positive, 96% (13,135) of whom were put on treatment. This treatment coverage is five percent higher than that of 2017. The trend in treatment coverage at ANC can be found in table 13-4.

2.5 Condom Distribution and Sexually Transmitted Infection Management

Sexually Transmitted Infections (STI) increase the risk of HIV transmission and condoms are known to significantly reduce transmission of these STIs including HIV. With the support of the Ministry of Health, USAID and UNFPA, the Programme distributed a total of 5,460,144 condoms to the public through the Family Health Division of the Ghana Health Service. This data excludes condoms distributed through Private sector channels such as Private Pharmacies and Chemical shops. There has generally been a 10% increase in the number of condoms distributed since 2016 (fig 2-14). Though figure 2-14 shows a 22% rise in the number of STI cases reporting for management since 2016, the gradient reduced from 16% increment (27,098) between 2016 and 2017 to 6% increment (11,227) between 2017 and 2018. The increase in the number of condoms distributed could possibly have contributed to this decline but condom utilization within the Public Health facilities is very low due to weak distribution and promotion systems. There is, therefore, the need to address those issues and develop interventions to reduce the stigma that limits access to condoms. The number of STI cases managed in the various regions is as shown in figure 2-15.

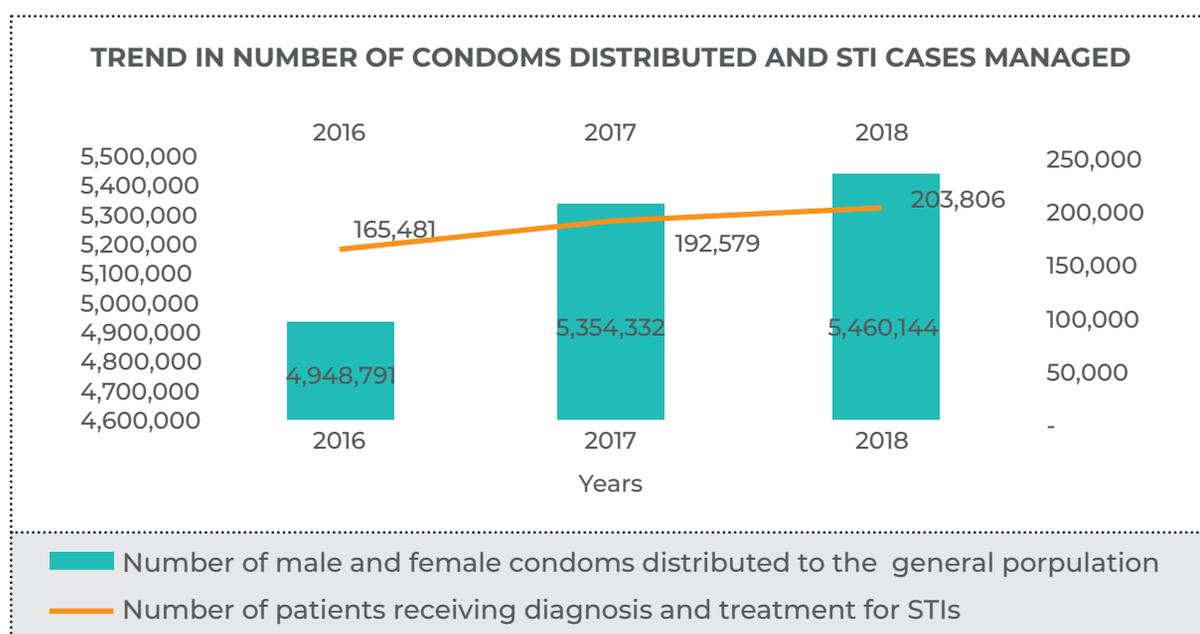

Figure 2-14 Trend in Condoms distributed and STI cases diagnosed and treated

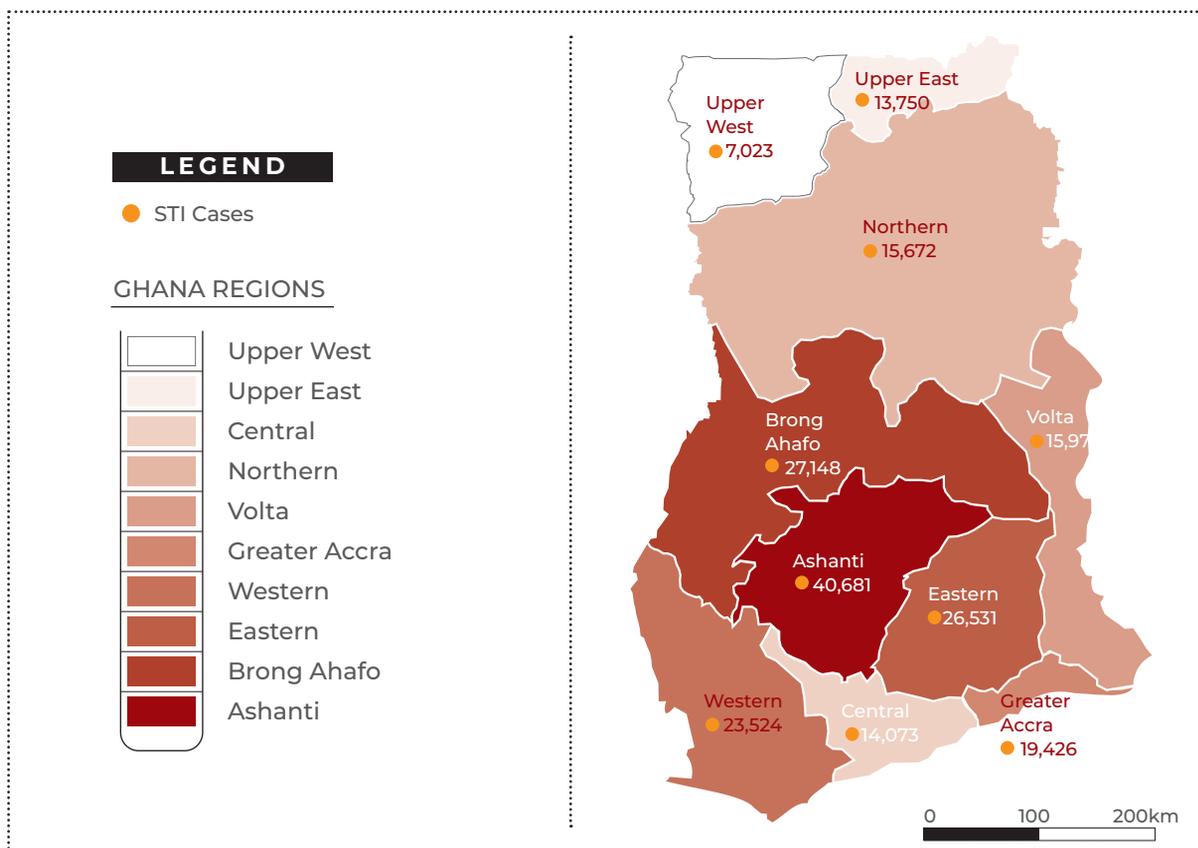

Figure 2-15 Number of STI cases managed in various regions

2.6 Blood Safety

To decrease the risk of transmission of HIV through infected blood and blood products, the Programme supplied health facilities with test kits to screen blood. Out of the 250,329 units of blood screened, 1.4% (3,578) were found reactive, a reduction from the 5.1% rate in 2017. Table 2-1 gives the regional distribution of the units tested and their reactivity. The Programme built the capacity of National Blood Service staff during the year under review to get all reactive clients linked to care for confirmation and initiation on ARVs if confirmed positive.

Table 2-1 Yield from Regional Blood Screening

REGION	NUMBER OF BLOOD UNITS SCREENED	NUMBER REACTIVE	% REACTIVE
Ashanti	22,221	280	1.26%
Brong Ahafo	31,343	612	1.95%
Central	34,886	182	0.52%
Eastern	26,357	486	1.84%
Greater Accra	36,500	431	1.18%
Northern	16,624	217	1.31%
Upper East	14,535	135	0.93%
Upper West	12,950	238	1.84%
Volta	25,084	269	1.07%
Western	29,829	728	2.44%
Total	250,329	3,578	1.43%

2.7 Post-exposure prophylaxis

Ghana’s ART guidelines recommend the offering of ARVs to persons who have been exposed to HIV either through rape or during health service delivery to infected persons, to reduce their risk of acquiring the infection. Eighty-three percent (1,467) of the 1,760 reported cases needing post-exposure prophylaxis in 2018 was occupational (figure 2-16) and almost half (49%) of the occupational exposures were classified as high risk (table 2-2). There is, therefore, the need to sensitize service providers to improve their infection prevention practices. The general population must also be educated as 17% and 41% of the total reported and high exposures respectively were due to rape. All the rape survivors and 80% of occupational exposures (low and high risk) were provided with prophylaxis according to national guidelines. Of the 1,545 that were tested at follow-up, two were found positive, giving a transmission rate of 0.13%. Table 2-2 gives a breakdown of the regional figures.

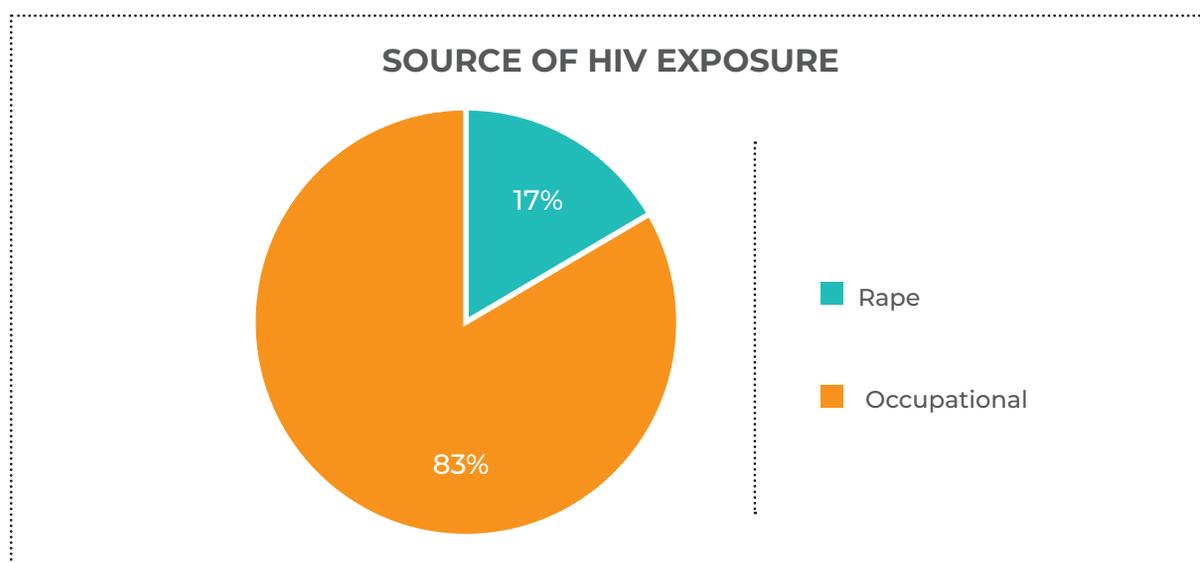

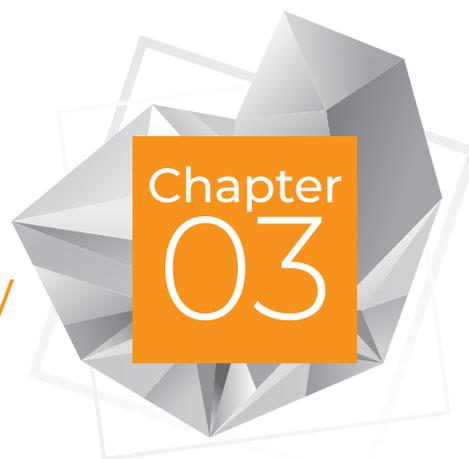

Figure 2 - 16 Sources of HIV exposure -2018

Table 2-2: Number of Persons Provided with Post Exposure Prophylaxis by Region

REGION	No. of Facilities with Protocol	No. of Cases Reported	RISK LEVEL				OUT-COME		
			Very Low	Low	High		Positive	Negative	Follow Up
					Occupational	Rape

The Delivery of the Package of Care and Support Services for PLHIV

Provision of care and support to persons diagnosed with HIV is key to ensure their retention in care, adherence to medication and viral suppression. This, when done, will cause an improvement in their quality of life and reduce the incidence of AIDS-related deaths. To achieve this, the Programme supported service providers to

1. Link newly diagnosed clients into care,
2. Provide antiretroviral therapy to all positive clients,
3. Prevent and manage opportunistic infections (OIs),
4. Provide Continuous Supportive Counselling and
5. Ensure delivery of effective home-based Care.

In the course of the year, the Programme also worked with various associations of Persons Living with HIV and involved them in intervention planning and implementation.

3.1 Linkage to care

With the 'treat all policy', all persons diagnosed with HIV are eligible for treatment. Out of the 72,291 newly diagnosed persons in 2018, 30,410 clients were initiated on ARVs giving a linkage rate of 42%. This is a decline from 46% in 2017, possibly due to the challenges with data capture and the likelihood of multiple testing by those already diagnosed. This number of newly initiated clients is, however, the highest in the last 5 years (figure 3-1). Adults (15+ years) constituted 95% (28,782) of those initiated and by gender, females formed the majority (71%). The numbers of people newly initiated in the various regions are captured in figure 3-2. Only 42% of the 67,842 adults diagnosed were initiated while only 37% of the 4,449 diagnosed children were initiated on ARVs in 2018. This gap in ARV initiation is significant and needs to be addressed. Table 13-5 in appendix 1 has details of those diagnosed but not initiated.

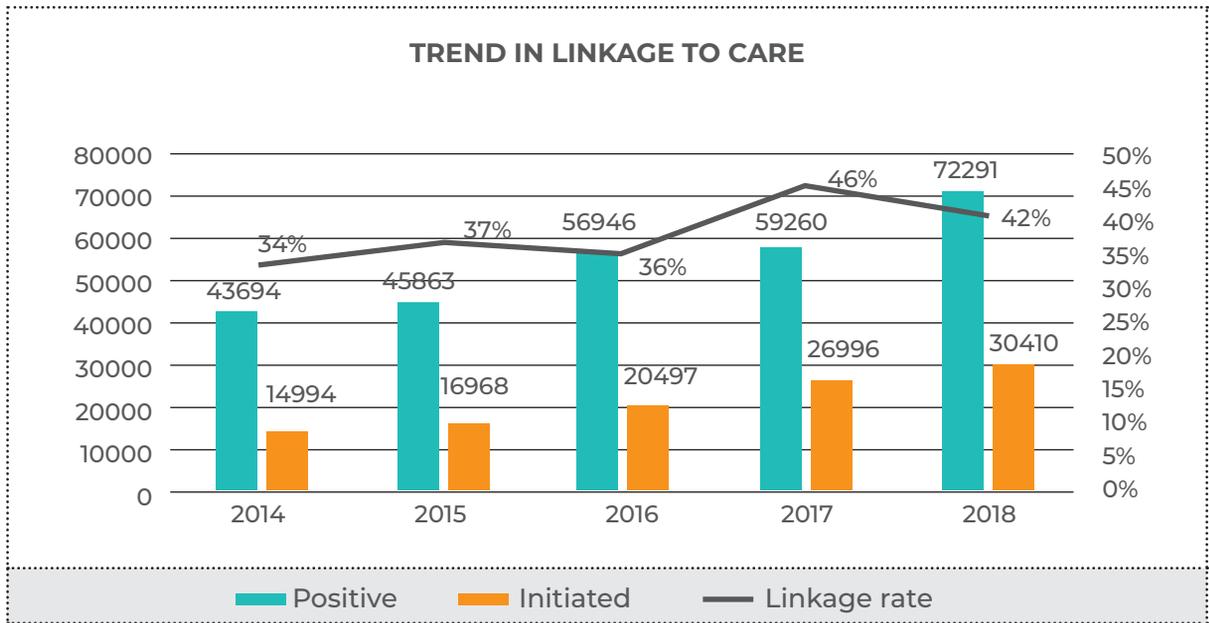

Figure 3-1 Trend in linkage to care

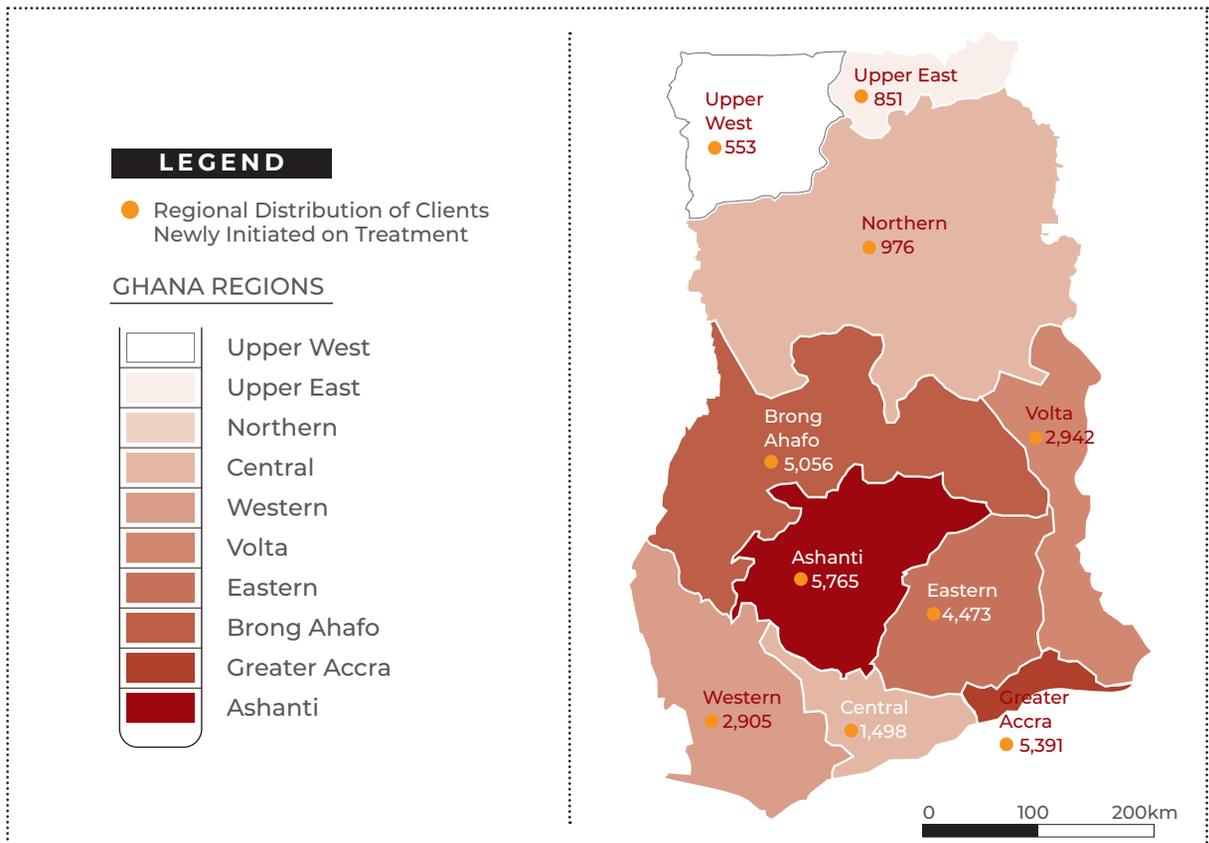

Figure 3-2 Numbers of clients newly initiated in each region in 2018

3.2 Losses to adverse events and death.

Of those initiated, 2,361 were lost due to adverse events and death, keeping a total of 28,049 newly retained clients in care. The regional breakdown for these can be found in table 3-1.

Table 3-1 Losses to adverse events and death by region 2018

REGIONS	Newly Initiated in 2018	(Losses) Death & Adverse Events	Clients Retained
Ashanti	5,765	453	5,312
Brong Ahafo	5,056	252	4,804
Central	1,498	60	1,438
Eastern	4,473	350	4,123
Greater Accra	5,391	450	4,941
Northern	976	156	820
Upper East	851	119	732
Upper West	553	72	481
Volta	2,942	272	2,670
Western	2,905	177	2,728
Total	30,410	2,361	28,049

3.3 Total clients on treatment

As at December 2018, there were a total of 113,171 clients on treatment, majority of whom were in the Greater Accra Region. The regional breakdown for the clients on treatment is as found in table 3-2.

Table 3-2: clients on treatment as of December 2018

REGION	MALE_ADULT	FEMALE_ADULT	MALE_PAEDIC	FEMALE_PAEDIC	TOTAL
AR	5,055	15,929	549	556	22,090
BAR	3,312	11,781	453	476	16,023
CR	1,057	4,536	122	140	5,856
ER	3,571	11,850	416	444	16,281
GAR	6,342	16,964	696	613	24,614
NR	835	2,667	96	86	3,684
UER	833	2,709	95	114	3,751
UWR	631	1,945	62	67	2,706
VR	1,947	6,652	264	245	9,108
WR	1,978	6,698	153	228	9,058
TOTAL	25,560	81,733	2,908	2,970	113,171

3.4 Prevention and Management of Opportunistic infections

Due to the immunosuppression induced by infection with HIV, the clients are predisposed to opportunistic infections such as tuberculosis, Cryptococcal meningitis, Pneumocystis jiroveci pneumonia, and toxoplasmosis. Due to their 50% chance of acquiring TB in their life time, it is recommended that HIV positive clients are screened for TB at every visit and put on treatment when found infected. In 2018, a total of 75,191 clients were screened for TB and 1,171 co-infected individuals were put on treatment. Septrin was also offered to 26,023 newly diagnosed clients to provide primary prophylaxis from toxoplasmosis and Pneumocystis jiroveci pneumonia. This prophylaxis was offered to all the newly diagnosed children whilst 84% of newly diagnosed adults were also covered.

3.5 Procurement and Supply Management of HIV logistics

3.5.1 HIV Screening

HIV screening is the entry point to the provision of care and support to persons living with HIV. Of the estimated target of 2,635,050 people to be screened in 2018, a total of 3,541,600 pieces of HIV first response rapid diagnostic test kits was made available for screening in 2018. A total of 1,607,400 First Response kits were delivered by the Global Fund and 57,000 by the Government of Ghana (GoG). For the confirmatory Oraquick, 154,100 and 104,000 test kits were provided by the Global Fund and GoG respectively.

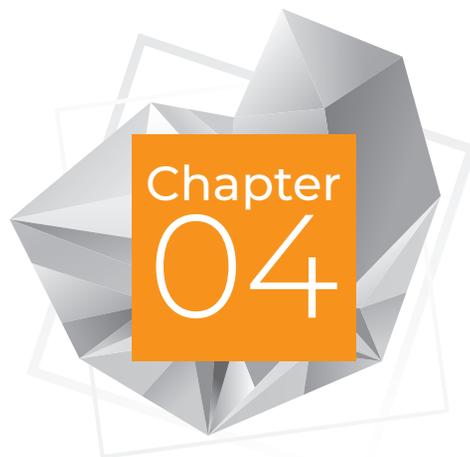

3.5.2 HIV and AIDS medication for service provision

All antiretroviral medicines required to ensure the ability-to-treat all HIV clients were largely available in 2018. The Global Fund fulfilled its commitment to the procurement of ARVs for the country. PEPFAR also assisted the country to procure \$3,824,624.98 of commodities under the recently ended MoU. Under the terms of the agreement with PEPFAR, the Government of Ghana (GoG) was also required to show evidence of procurement of commodities valued at \$3,200,000.00 after the initial fulfilment of the PEPFAR obligation. Since PEPFAR support for HIV commodities has been discontinued, the Government of Ghana will be required to procure additional quantities to fill the increasing gap. In the year 2019, the Government is expected to fill commodity gap estimated at \$13.9million.

3.5.3 Commodities for patient monitoring

Viral load and EID reagents procured for the year 2018 amounted to 1,748,184.53million. The number of tests forecasted to be done in 2018 for viral load and EID were 186,447 and 34,372 tests respectively. Commodities to conduct a total of 16,927 EID tests were made available in 2018. However, a total of 9,549 tests were reported to have been conducted. The viral load and EID logistics reporting tool introduced in 2018 currently facilitates the uptake and reporting of the reagents and results for patient monitoring at the testing site. The ongoing implementation of the sample referral system is expected to further increase uptake therefore, increasing the demand for viral load and EID commodities in 2019.

Laboratory Systems Strengthening and Viral Load Testing

The United States Government under the Co-operative Agreement between the Ghana Health Service and the Centres for Disease Control and Prevention, Atlanta together with the Global Fund for AIDS, Tuberculosis and Malaria, provided funding for some activities which were implemented by the NACP in collaboration with the Institutional Care Division (ICD) on behalf of the Ghana Health Service. Main activities undertaken were under the following broad headings:

4.1 Proficiency Testing Programs (PT)

Assessment is a critical aspect of laboratory quality management, and it can be conducted in several ways. One of the commonly employed assessment methods is that of external quality assessment (EQA) of which the most commonly employed component is proficiency testing (PT) where an external provider sends unknown samples for testing to a set of laboratories, and the results of all laboratories are analyzed, compared and reported to the laboratories. Two proficiency testing schemes are done under the National AIDS/STI Control Programme namely: proficiency testing Programme for viral load/EID and Dried Tube Specimen (DTS) PT Programme for HIV rapid testing.

4.1.1 Proficiency testing for viral load/EID:

This is a US Centres for Disease Control (CDC) and Prevention supported scheme which is administered from Senegal through the Institut de Recherché en Santé, de Surveillance Epidémiologique et de Formation (IRESSEF) or Institute for Health Research, Epidemiological Surveillance and Training and Cheikh Anta Diop University (CADU). The nine (9) PCR sites in Greater Accra, Western, and Eastern, Central, Brong-Ahafo, Ashanti, Northern, Volta, and Upper East regions were enrolled in the external quality assurance Programme for viral load and early infant diagnosis of HIV. The sites performed satisfactorily in 2018.

4.1.2 The Dried Tube Specimen Proficiency Testing (DTSPT).

The DTS PT Programme is administered locally by NACP through the support of regional and zonal coordinators on a biannual basis in five (5) regions namely: Ashanti, Brong Ahafo, Eastern, Greater Accra, and Western regions. During the implementation of the 6th round of the DTS PT Programme in 2018, 60 new HIV testing sites from high burden sites in the five (5) regions were added to bring the total number of sites currently enrolled on the scheme to 630. The PT sites consist of 432 ANC/PMTCT, 88 HTC and 110 laboratories (including the 40 HIV Sentinel testing sites). Of the 630 sites enrolled in round six, only 76% received satisfactory scores. This is a decrease from a pass rate of 91% in round 5. Reasons for this high failure rate (24%) included non-adherence to national HIV testing algorithm, incorrect panel results, and non-reporting of final test results.

4.2 Basic Laboratory Information System (BLIS)

The Basic Laboratory Information System (BLIS) is an open-source system to track patients, specimens and laboratory results. The C4G BLIS is a joint initiative of Computing for Good (C4G) at the Georgia Institute of Technology, the Centres for Disease Control and Prevention (CDC) and Ministries of Health of several countries in Africa including Ghana. For the year under review, installation, configuration, and interfacing of BLIS with PCR analysers were carried out in seven (7) regions; namely Greater Accra, Central, Ashanti, Eastern, Brong-Ahafo, Volta and Western. Training in the use of BLIS interfacing software was conducted in the seven regions visited.

4.3 Site Improvement Monitoring System

Monitoring, site support, and supervision visits were undertaken for Viral Load/EID and Basic Laboratory Information Systems (BLIS). All the nine (9) PCR sites were covered in Quarter three and four visits for VL and EID while seven (7) PCR sites were visited for BLIS. The viral load monitoring was carried out to assess the coverage and quality of HIV Viral Load/EID testing services in the facilities, determine the level of implementation of BLIS for client data capture and reporting at the laboratories and provide onsite support to the staff of the sites. Also, E-tracker monitoring visits to targeted facilities within the Greater Accra, Central, and Eastern Region was conducted.

4.4 Viral Load Scale up and Specimen Referral System

4.4.1 Development of viral load scale-up plan and standard operating procedures (SOPs):

The viral load scale-up and the operational plan was printed and disseminated at the regional level. The facility level dissemination is being done together with the differentiated service delivery (DSD) orientation. Also, standard operating procedures (SOPs) and job aids as well as data collection tools such as registers, and request forms were developed to support the viral load testing services. Soft copies of these tools were disseminated to health staff especially the medical laboratory scientists at the ART facilities and the viral load testing centres. Hard copies of these documents have been printed for dissemination to facilities during step down DSD orientation.

4.4.2 Installation of three (3) new PCR machines:

To optimize testing capacity and meet the increasing demand for viral load/EID testing services, three (3) new high throughput PCR machines (Roche CAP/CTM Taqman 96) were procured and installed at the Immunology Department of the Korle-Bu Teaching Hospital, Virology Unit of the Komfo Anokye Teaching Hospital and the Brong-Ahafo regional hospital laboratory in May 2018.

4.4.3 Viral Load (3rd 90) review meeting by stakeholders:

There was a review meeting in December 2018 for key stakeholders to deliberate on strategies to accelerate the attainment of the 3rd 90 following the roll out of specimen referral system in September 2018. This was necessary because the viral load coverage attained as of September 2018 was 23% which is way below the third 90 targets.

4.5 Operationalization of the sample referral system

Specimen referral networks and strengthening of laboratories will play a key role in the scale-up of viral load (VL) testing and continued enhancement of early infant diagnosis of HIV. To operationalize the sample referral system, the Ghana Health Service signed a memorandum of understanding with the Ghana Post Company Ltd to offer third-party courier services for sample transport and return of results to the referring facilities for decision making. To test the country's initial operational capacity; the sample referral system was piloted in 25 high HIV burden facilities in the Greater Accra region. Information obtained from this pilot was used to refine the national roll out. Prior to the implementation of the sample referral system, the critical staff at the ART sites in the country were provided orientation on sample collection, processing and packaging for shipment and the sample pick up process. Also, operators (drivers and riders) of Ghana Post Company Ltd were provided orientation on the transport of hazardous materials and the sample pick up process.

4.6 Laboratory quality management system (QMS) and quality control (QC):

Laboratories produce test results that are widely used in clinical and public health settings, and health outcomes depend on the accuracy of the testing and reporting. In response to the serious gaps identified in the knowledge and practice of quality management systems by laboratory scientists in the ART sites, the National AIDS/STI Control Programme (NACP) in collaboration with the regional Laboratory Quality Management Trainers organized a 5-Day intensive training for laboratory Managers and Quality managers drawn from 271 ART sites in the country. The purpose of the training was to equip them with the knowledge and skills needed to implement the Quality Management system in their laboratories. Also, a 2-day training was done for the Managers in these facilities in quality control as an adjunct to the QMS training.

4.7 Refresher training for data officers on data completeness and quality:

E-tracker refresher training for newly recruited data officers was conducted. They were taken through the general use of e-tracker especially with the tracker capture application

and event reports.

4.8 Laboratory equipment policy development

Health Technology Management plays a significant role in the process of achieving national and global health targets. However, advances in engineering have resulted in a health system that depends heavily on technologies which are not only difficult to apply and maintain but also require huge financial outlay. This has changed the way these technologies are acquired, applied, managed, maintained and finally disposed of. A Laboratory equipment policy was therefore developed led by the engineering unit of Ghana Health Service. This document sets out the broad guidelines and operational management framework for Clinical Engineering in the Ghana Health Service. It is part of the processes for strengthening the Service's operational system to ensure effectiveness and efficiency in its activities. This policy is intended to cover all medical equipment used for diagnosis, prevention, monitoring, treatment, rehabilitation and alleviation of human disease or injury and the key guiding principles to ensure that all issues pertaining to the life cycle of equipment are properly addressed from the time of acquisition to the time of disposal.

4.9 HIV rapid test algorithm review

The current testing algorithm has been in use for the past decade. Given that Ghana is now a low HIV prevalence country with prevalence in the general population of 1.67%, it has become necessary to evaluate the current algorithm and adopt the three-test algorithm in line with WHO recommendation for countries with a prevalence of less than 5%. A total of six (6) FDA approved kits were evaluated by a team of technical experts led by a consultant. Based on the diagnostic and operational characteristics of the kits, the three recommended test kits constituting the national testing algorithm are First Response HIV 1&2, OraQuick HIV 1&, and SD Biotec HIV 1&2 in series. Also, the HIV/Syphilis Duo kit was recommended for use as the initial test in antenatal settings.

Viral Load Testing

Viral load testing is done to objectively assess client adherence to medications, the progress of treatment and to diagnose treatment failure or drug resistance. To increase demand for viral load testing, orientation on the need for viral load testing was included in all training sessions organized by the Programme for service providers. These included ART training for newly accredited facilities, orientation on Differentiated Service delivery, orientation on the Paediatric HIV SOPs and job aids as well as facility engagements during supportive supervisory visits. The staff were also encouraged to educate clients on viral load testing, so they will remind the service providers when they are due to be tested. SOPs, job aids and patient education posters meant to promote viral load testing were also distributed as part of the DSD orientation.

As at June 2018, there were 100,000 clients on treatment, who were all eligible for viral load testing by December 2018. From these, 54,538 viral load tests had been done as at 31st December 2018 (figure 4-1) out of which 36,226 were found virally suppressed, giving a crude suppression rate of 66%. Figure 4-2 provides the full 90-90-90 cascade of care for the country as of December 2018.

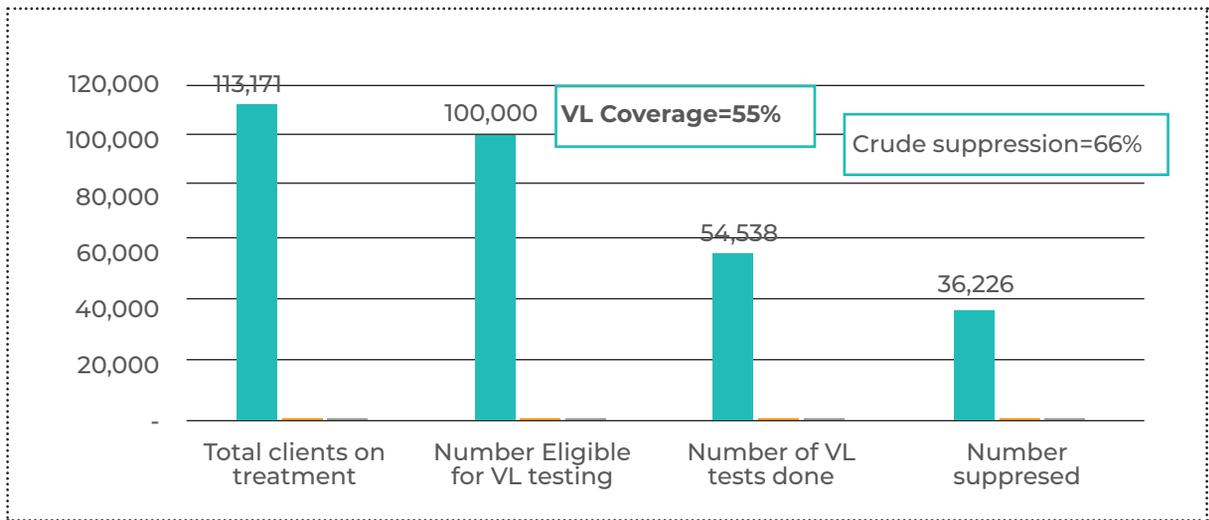

Figure 4-1 Viral load testing cascade 2018

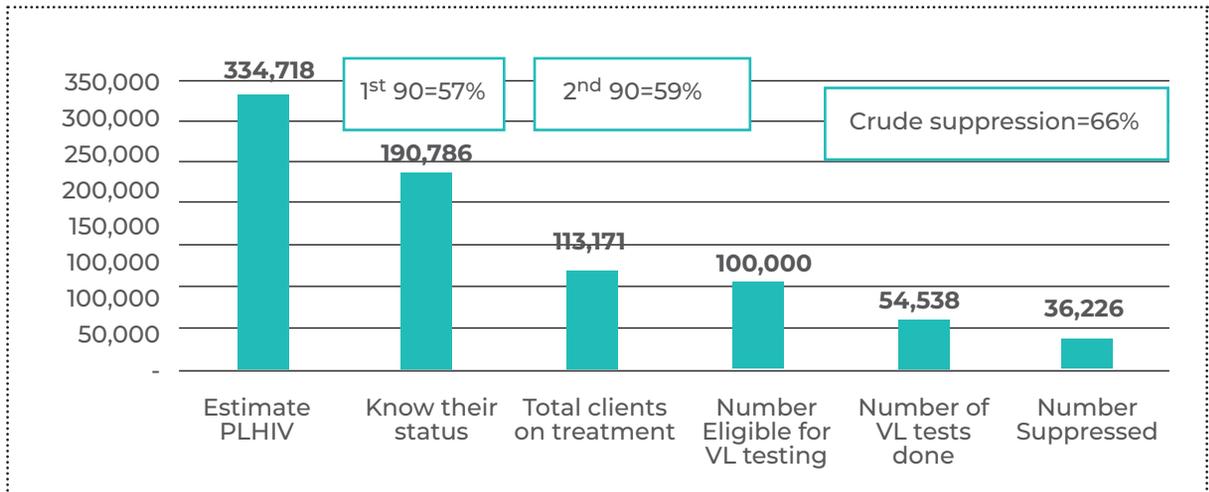

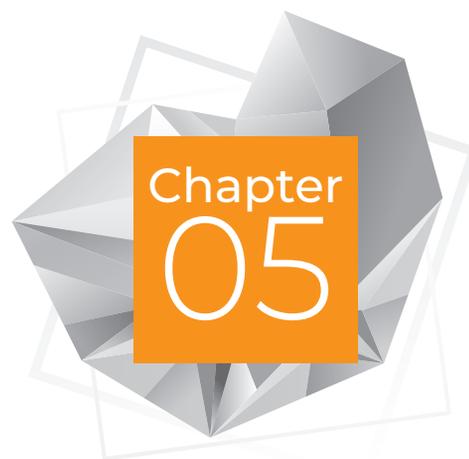

Figure 4-2 90-90-90 Cascade, 2018 National HIV Spectrum Estimates

The Delivery of Strategic Information on HIV and AIDS

5.1 Guideline development

In 2018, the following documents were developed to guide service delivery for clients:

5.1.1 Guidelines for TB Preventive Therapy in Ghana:

Tuberculosis is the number one cause of morbidity and mortality among persons living with HIV. Their susceptibility to this infection is due to the immunosuppression that the HIV causes, making them have a 50% chance of acquiring the infection in their lifetime. TB Preventive Therapy has been recommended by WHO as an intervention to protect HIV infected persons from tuberculosis. To guide the delivery of this service to clients and address key Programmatic, logistic and data issues, a joint TB/HIV task force was constituted to develop Ghana's Operational Manual for TB Preventive Therapy in May 2018. An Implementation road map was developed, which is tracked by the TB/HIV task team.

5.1.2 Paediatric HIV SOPs and Job AIDS:

To bridge the barriers that hamper Paediatric HIV care in the country, a situational analysis was conducted, leading to the development of the National Acceleration Plan for Paediatric HIV services (2016). In line with its recommendations to demystify Paediatric HIV care, the Paediatric HIV task team, in February 2018, developed some Algorithms and job aids that can be used at all levels of care in Ghana. The tools developed include

- Algorithms for managing a possible HIV infection, family screening, early infant diagnosis, viral load testing, psychosocial support for adolescents living with HIV and disclosure of HIV status in children.
- Flow chart for HIV testing.
- ARV and Septrin dosage forms.
- Family HIV screening matrix.

- Job aids for
 1. conducting HIV testing & counselling among children & adolescents.
 2. how to disclose HIV diagnosis to infected children & adolescents.
 3. how to counsel children & adolescents living with HIV.
 4. on psychosocial assessment & management of adolescents living with HIV (ALHIV).
 5. Screening & management of opportunistic infections & common health problems among children and adolescents living with HIV.
 6. Tuberculosis management in HIV positive children.

With the support of UNICEF, copies of this document were printed and used to orient service providers in 40 selected facilities. The feedback from the orientation has been used to firm up the initial versions which will be printed and distributed to all service delivery points across the country in 2019.

5.2 HIV sentinel Surveys

As part of its mandate to provide Strategic information to guide the control of the HIV epidemic in Ghana, the NACP conducts HIV sentinel surveys (HSS) annually. The objectives of the HSS are

1. To determine the HIV and syphilis prevalence among ANC and STI clients
2. To monitor the trends in HIV and syphilis prevalence among ANC and STI clients at sentinel sites
3. To provide data for the estimation and projection of HIV prevalence in the general population of Ghana
4. To provide data to inform intervention programs and policy decisions.

It is based on an annual HIV sero-prevalence survey conducted using unlinked anonymous samples from pregnant women accessing antenatal services for the first time and clients seeking treatment for STI during the survey period at 69 antenatal clinics from 40 sentinel sites. The Survey results are the primary data for the estimation and projection of HIV infection in the general population which provides a firm basis for planning and forecasting for prevention, treatment, management, and care-related programs.

In 2018, samples were collected from the 40 sentinel sites. The site prevalence ranged from 0.0% in Krachi to 4.0% in Koforidua and Sefwi Asafo. The overall national median prevalence was 2.4%.

A three-day orientation was provided at Miklin Hotel in Kumasi for the survey staff in the third quarter of 2018, who helped conduct the survey for the year.

Figure 5-1 shows the ANC prevalence for various regions from the 2018 HSS.

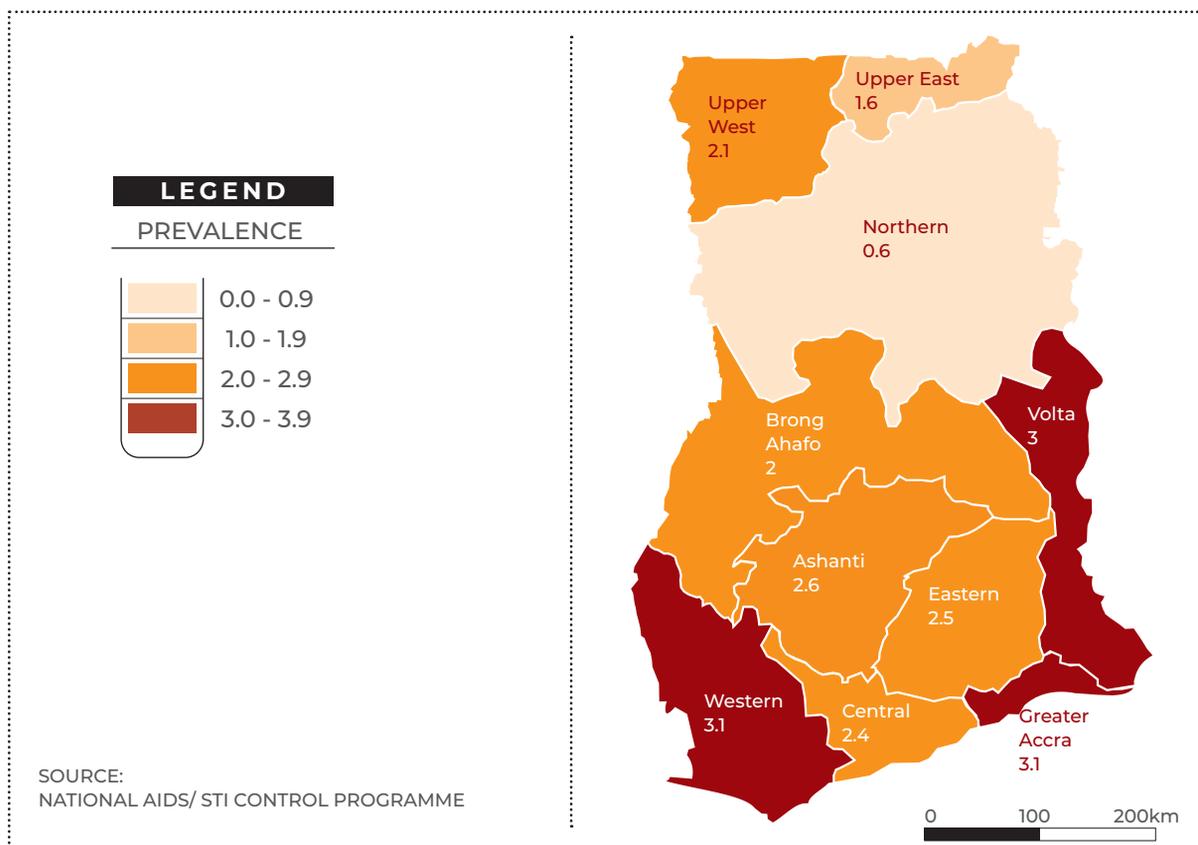

Figure 5-1 ANC prevalence by Region -2018

5.3 Participation In Conferences

In 2018, the Programme participated in local and international conferences to learn and share ideas on how to effectively control the epidemic.

5.31 National HIV/AIDS Research Conference 2018:

The National HIV & AIDS Research Conference (NHARCON) is organized by the Ghana AIDS Commission (GAC) every four years. The 2018 conference, which ran from the 8th -11th May 2018, was the fourth to be organized by the Commission. Apart from forming part of GAC’s mandate to disseminate and share HIV and AIDS strategic information with its stakeholders and partners in the implementation of the National Response, it also served as a platform to share ideas in support of the implementation of the current National Strategic Plan 2016-2020. Based on the theme “Ending AIDS: Rethinking Practice for Maximum impact”, it drew a lot of participants from across the globe. The NACP took active part from the planning stage and contributed some abstracts to the knowledge that was shared through the oral and poster presentations as well as panel discussions. The 2017 annual HSS results were also disseminated at this forum.

5.3.2 International AIDS Conference-Amsterdam 2018:

The NACP took part in the 22nd International AIDS Conference held in Amsterdam in the Netherlands from 23rd to 27th July 2018 and presented a poster abstract on “Service delivery barriers to accessing HIV-related services for key populations in Southern Ghana”.

Provision of Essential Technical Support to All Ministries Departments and Agencies in the Implementation of their Programmes

The NACP continued to provide technical support to various MDAs and stakeholders in their workplace HIV and AIDS programs. The Programme participated fully in most activities of the Ghana AIDS Commission and the Country Coordinating Mechanism (CCM) of the Global Fund by providing technical assistance to enhance their advocacy role.

6.1 Academic Institutions

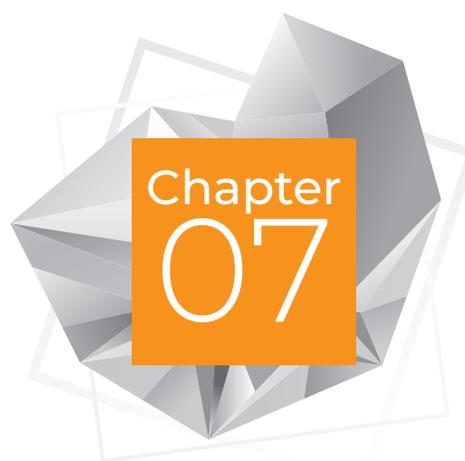

Students from the Ghana College of Physicians and Surgeons, University of Ghana School of Medicine and Dentistry, School of Nursing and School of Public Health spent weeks with the Programme to gain practical skills on what they had been taught. Students from other foreign and local institutions were also supported to undertake HIV-related research for the fulfillment of their Masters and Ph.D. requirements.

6.2 The Free to Shine Campaign

In 2018, the Programme supported the development of Terms of Reference for the “Free to Shine” Campaign, an initiative of the African Union (AU), the Organisation of African First Ladies against HIV/AIDS (OAFLA) and their partners to contribute to ending the paediatric HIV epidemic by 2030 through elimination of new infections in children and keeping mothers alive. The Programme shall further support the initiative, spearheaded by Ghana’s First Lady to eliminate mother to child transmission of HIV by;

1. Contributing to the content of the campaign messages
2. Supporting the delivery of campaign messages
3. Supporting the development of proposals for resource mobilization
4. Supporting the management of dedicated social media platforms designed for the campaign
5. Supporting the First Lady’s advocacy drives.
6. Supporting the sustainability of the campaign and maintenance of the momentum that will be generated.

Financial Information

7.1 Financial Summaries

The budget for 2018 was \$22,401,097.14 under the Global Fund grant but the Programme spent a total of \$8,866,992.99 translating to a Burn Rate of 69.3% for programme activities and a Burn Rate of 31.7% for Pooled Procurement Mechanism (PPM). Expenditure from other donors (CDC, WHO and the UNICEF) amounted to \$683,605.77, representing 82.8% of total receipts of \$825,433.46.

These Funds supported the GHS/MOH in the implementation of its strategic activities such as EMTCT, ART, and HIV Testing, HIV/TB Collaboration, Health Systems Strengthening, Programme Management, and M&E. The year’s total expenditure was \$9,550,598.76. A summary of the breakdown showing the budget, disbursement, and expenditures as at the end of 2018 is displayed below:

Table 7-1 Financial Summaries for 2018

Source of Funding	Total Grant Budget	Total Disbursement		Total Expenditure	
	US\$ 2018	US\$ 2017	US\$ 2018	US\$ 2017	US\$ 2018
NFM 2 Grant (1 Jan 2018 to 31 Dec 2020)	22,401,097.14				8,866,992.99
Others		1,351,368.95	825,433.46	1,242,075.21	683,605.77
Total		1,351,368.95	825,433.46	1,242,075.21	9,550,598.76

7.2 Total Expenditure within 2018

Expenditure under the NFM 2 amounted to \$8,866,992.99 while expenditure under others amounted to \$683,605.77.

The cost categories are as defined below:

1. Human Resource- includes all HR expenditure under the grants
2. Travel Related Cost -includes training, Supervision, surveys, data collection, meeting, advocacy related costs, etc.
3. External Professional services - includes Data Quality Assessment, HIV Sentinel Survey, DHIMS activities, etc.
4. Health Products - Pharmaceutical Products - includes Procurement of ARVs for ART, etc.
5. Health Products - Non-Pharmaceuticals -includes Procurement of HIV Test kits, BD, Viral Load, Haematology and Chemistry reagents, etc.
6. Health Products- Equipment -includes the cost of Maintenance for Laboratory equipment, CD4 and Hematology Machines, etc.
7. Procurement and Supply-Chain Management costs (PSM)-includes Freight and Insurance, Warehouse and Storage, distribution, etc.
8. Non-health equipment- includes the procurement of Computers and Accessories for ART client Data capture and monitoring
9. Communication Material and Publications - includes the cost of printing of tools and registers, IEC materials, reports, PMTCT and HTC manuals, etc.
10. Programme Administration costs - includes office related costs.

The total expenditure in 2018 as defined according to Cost Groupings and Modules respectively are shown in tables 7.2. & 7.3

Table 7-2 Total expenditure by cost grouping

Cost Groupings	NFM Grant	Others	Total Expenditures
	USD	USD	USD
1.0 Human Resources (HR)	2,364,650.58	139,072.18	2,503,722.76
2.0 Travel related costs (TRC)	1,179,475.87	397,417.77	1,576,893.64
3.0 External Professional services (EPS)	43,940.80		43,940.80
4.0 Health Products - Pharmaceutical Products (HPPP)	4,105,828.79		4,105,828.79
5.0 Health Products - Non-Pharmaceuticals (HPNP)	88,146.36		88,146.36
6.0 Health Products - Equipment (HPE)	284,032.25		284,032.25
7.0 Procurement and Supply-Chain Management costs (PSM)	691,459.03		691,459.03
8.0 Infrastructure (INF)	8,431.59		8,431.59
9.0 Non-health equipment (NHP)		3,682.80	3,682.80
10.0 Communication Material and Publications (CMP)	12,946.07		12,946.07
11.0 Programme Administration costs (PA)	88,081.65	143,433.03	231,514.68
TOTAL	8,866,992.99	683,605.77	9,550,598.76

7.3 Financial Support to Regions

The programme disbursed a total amount of \$84,602.25 to all the ten regions to undertake monitoring activities at both regional and district levels, in 2018. Below is a table showing the actual amounts allocated to each region and a graphical representation of the amounts allocated

Table 7-4 Financial Support to Regions for Monitoring and Supervision

REGION	AMOUNT US\$
Ashanti Region	10,355.15
Brong Ahafo Region	9,479.62
Central Region	7,508.15
Eastern Region	10,140.89
Greater Accra Region	7,539.88
Northern Region	9,309.03
Upper East Region	6,640.89
Upper West Region	5,542.88
Volta Region	9,479.62
Western Region	8,606.15
TOTAL	84,602.25

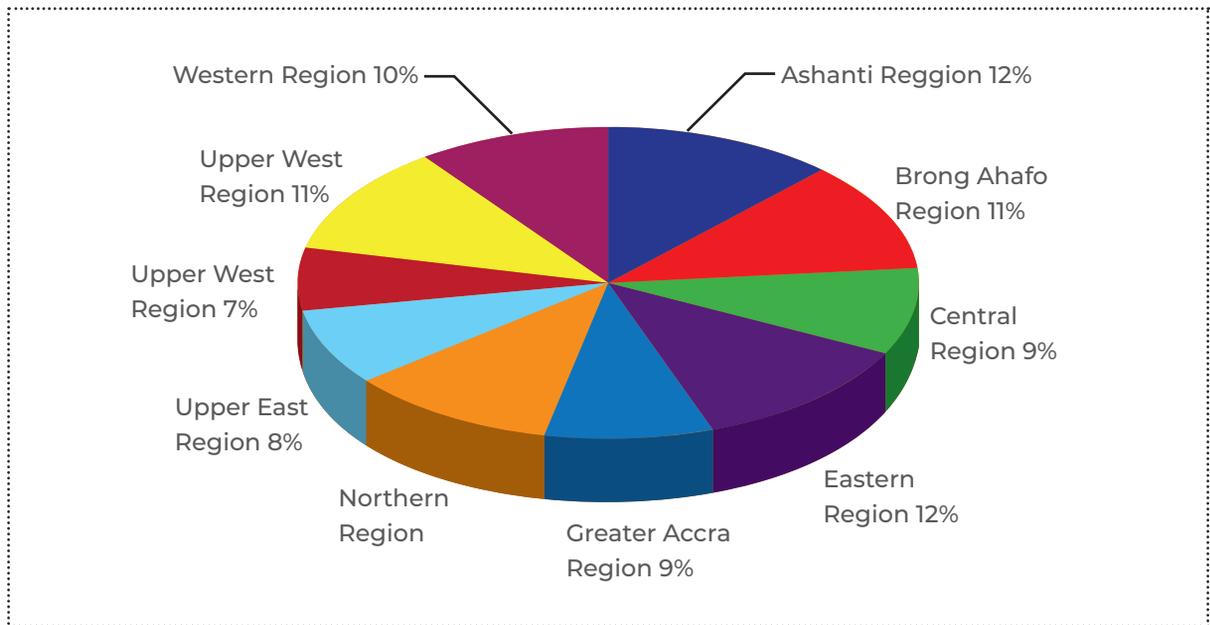

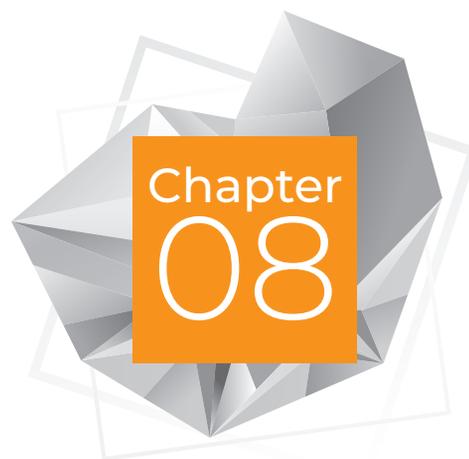

Figure 7-3 Total Support to Regions in 2018

Training and Monitoring

8.1 Capacity building

To update service providers on new knowledge in HIV care and improve their skills in service delivery, the Programme organized a number of training sessions in 2018 which are captured below:

8.1.1 Capacity building for Early infant diagnosis:

Without ARVs, HIV infection progresses very fast among infected new-borns, with up to 50% dying before their second birthday. In order to diagnose them and intervene early, Ghana's early infant diagnosis algorithm was revised by the Paediatric HIV Task Team, to include testing in the first week of life, the sixth week of life and at 18 months. To increase demand for testing and increase the testing coverage for HIV exposed infants, staff from 376 facilities were trained in Dried Blood Spots(DBS) sample collection, storage, and transport in all 10 regions of the country. In addition, the early infant diagnosis algorithm has been included in all training sessions after 40 pilot facilities helped to firm it up.

8.1.2 Capacity building for family-based index client testing:

To introduce efficiency in HIV testing and increase testing yield, the Programme, with the support of UNICEF, oriented service providers from 40 facilities on family-based index client testing in 2018. Family-based testing is the voluntary offer of HIV testing to the children, partner, and siblings of already diagnosed clients and reportedly has the highest yields compared to other testing methods. The participants were drawn from the Ashanti, Brong Ahafo, Central, Greater Accra, and Western Regions and included Prescribers, Nurses, Midwives, Pharmacists, Biomedical Scientists and Models of Hope. With the reported high yields, the Programme anticipates a significant acceleration towards the attainment of the country's first 90 in 2019 as it scales up this intervention to other facilities and monitors those already oriented.

8.1.3 Antiretroviral Therapy training:

With plans to improve access to services for HIV positive clients, a total of 450 staff from 119 PMTCT sites in the Ashanti, Brong Ahafo, Central, Greater Accra, and Western Regions were given a five-day training using the Integrated Management of Adolescent and Adult Illness (IMAI) and Treat all Concepts. Among the participants were prescribers, HIV counsellors, Midwives, General Nurses, and Biomedical Scientists. All the facilities were after the training, eligible to make requisition for ARVs, test kits, and other commodities and were also assigned reporting forms in DHIMS. With the support of UNICEF, 16 additional facilities shall be trained in the Central Region in the first quarter of 2019.

8.1.4 Differentiated Service Delivery Orientation:

To deliver client-centred HIV care while introducing efficiency in service provision, the country adopted the Differentiated Model of Care for HIV and developed its manual. A task team was constituted and met in May 2018 to develop a costed implementation plan for roll out in Ghana. Trainer of Trainers Orientation sessions was organized for regional facilitators in the southern, middle and northern zones of the country. With the support of CDC, ten facilities in the Greater Accra Region were given a three-day on-site orientation on the DSD guidelines. They were taken through differentiated HIV testing, ARV delivery, and viral load testing and were provided support for facility-specific challenges. At the end of the orientation, they were guided to develop facility-specific implementation plans, influenced by the gaps identified by a baseline assessment tool that was administered prior to the orientation. Twenty additional facilities shall be oriented in the Ashanti, Brong Ahafo, Eastern, Greater Accra and Western Regions in the first quarter of 2019.

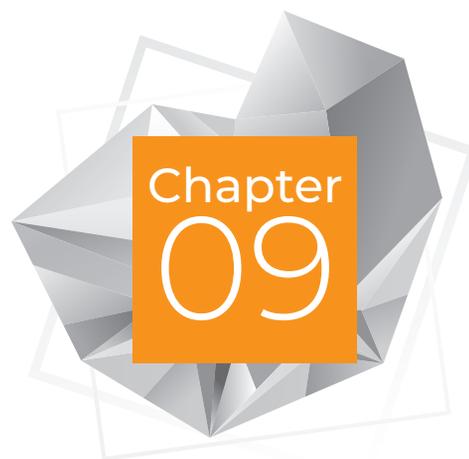

8.1.5 Orientation on TB Preventive Therapy:

In support of the implementation plans for TB Preventive Therapy in Ghana, Global Fund provided resources for the training of 710 health workers in regions that have a high burden of TB/HIV co-infection. In line with this, 10 facilities in the Greater Accra Region were provided a one-day orientation on TB preventive therapy, client monitoring, and data capture. They are therefore ready to start when commodities procured get into the country. The programme hopes to orient 20 additional facilities in the first quarter of 2019.

8.2 Supportive supervisory visits to ART sites

To address service delivery challenges, update service providers on new guidelines and policies, ensure quality in service provision and get the support of facility management for HIV services, the programme undertakes quarterly monitoring activities to purposively selected facilities in all regions. Each region should ideally be visited twice in a year during these monitoring sessions but due to competing priorities and engagements with partners, it only happened in the first and last quarters of 2018 with each region receiving one such supportive visit. The regions visited in the first quarter were Ashanti, BAR, Eastern, Western and Volta, while the rest was covered in the last quarter of the year.

Programme Performance Review

The progress of activities of the programme was reviewed in 2018 by both local and external teams.

9.1 Local Performance Reviews

9.1.1 Staff meetings:

The Programme held four quarterly staff meetings where the performance of various units against their planned activities for the quarter was reviewed and plans for subsequent quarters developed.

9.1.2 Technical Working Group (TWG) Meetings:

The HIV Technical Working group also had all its quarterly meetings held, to review the Programme's data, level of implementation of activities and to address key challenges that bedevil the Programme.

9.1.3 Joint TB/HIV Review Meeting:

The joint TB/HIV Annual Review meeting was held at Ho in 2018 to review the performance of the regions and Teaching Hospitals in the year 2017.

9.2 External Performance Reviews

9.2.1 First and second 90 Review:

A team from WHO, International AIDS Society, and Global Fund, reviewed Ghana's first and second 90s using data from DHIMS and facility visits. Their mission ended with a Strategic Inputs meeting where stakeholders were engaged to develop recommendations to address gaps identified. The review team, on the last day of the meeting, made recommendations, some of which were readily accepted by the country, while others, such as stopping testing at 34 weeks are yet to be sanctioned by the TWG.

9.2.2 High-Level Meeting:

A delegation from Global Fund held a High-Level Meeting in September 2018. The objectives of the meeting were to

- Support GoG's lead and action to accelerate progress to achieve 90-90-90, including addressing stigma and discrimination and barriers to accessing services.
- Agree on an action plan based on the main findings of the HIV programme and data reviews and new targets based on 2017 estimates.
- Engage GoG's leadership to honour HIV funding commitments based on PEPFAR MOU and GF co-funding requirements.
- Negotiate transition of ART patients currently on treatment to GoG domestic funding with GF and PEPFAR complementing and supporting the scale up.

The meeting ended with the

- Development of an AIDE MEMOIRE,
- Review of a costed acceleration Matrix n that was developed with support from UNAIDS and CDC
- Recommendation to review client on treatment,

9.2.3 Review of clients on treatment:

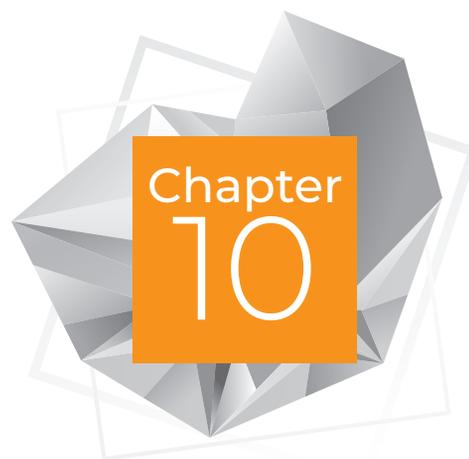

With the support of consultants from WHO and UNAIDS, the population of clients on treatment was reviewed. This was done by triangulating information drawn from a census conducted by PPMED, consumption data for HIV commodities and a survey conducted by EQUIP. The assessment led to the conclusion that there were 100,000 clients on treatment as of June 2018.

9.2.4 Audit by the office of the Inspector General for Global Fund:

The office of the Inspector General for Global fund also undertook one of its three-yearly audits and found the following as issues hampering the country's progress towards the 90-90-90 agenda:

1. Late disbursement of funds to regions
2. Low testing, limited proficiency testing, and unfunded prevention activities
3. Incomplete data and slow e-tracker implementation
4. Weak logistic Management Information System
5. Low ART enrolment and slow treat all implementation
6. Low viral load coverage

Steps have already been taken to address some of these issues.

Challenges

The following were challenges that hampered the attainment of set goals in 2018

10.1 Procurement

- Supply chain bottlenecks from procurement to last mile distribution.
- Limited visibility of stock at the IHS warehouse and all RMSs posed risk for expiry.
- Expired commodities were not disposed of timely.
- Unpredictable delivery timelines for the Government of Ghana procurement.
- Difficulty in accessing delivery van for distribution/ redistribution.
- Unavailability of adequate cold storage facilities at the regional level resulting in large volumes being stored in the private warehouse (I.H.S) at a high cost.

10.2 Financial

- Significant funding gap for implementation of critical interventions such as Differentiated Service Delivery and orientation of service providers on Paediatric HIV SOPs and the viral load scale-up plan.
- Outstanding penalties from SSNIT yielding interest.
- Delayed acquisition of VRPO affecting VAT issues.
- Delayed disbursement of funds from Global Fund

10.3 Data Management

- Inadequacy of integrated RCH registers for EMTCT and EID resulting in under-reporting of results.
- Delays in the deployment of e-Tracker
- Lack of funds for routine quarterly data monitoring
- Poor data collection on viral load

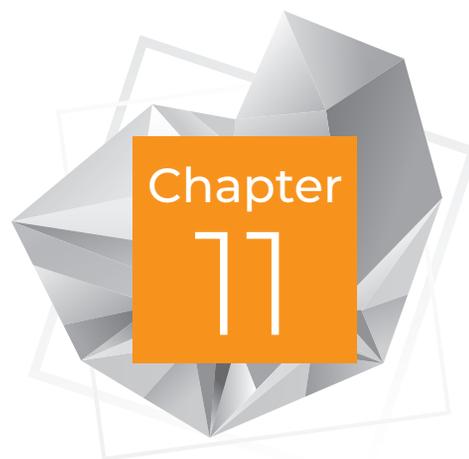

10.4 Service Delivery

- No funding support for preventive activities despite the need to prevent new infections.
- Limited Human resource at ART sites due to staff attrition.
- Low ART linkage rate and high loss-to-follow-up of clients.
- Challenges with the last mile distribution of ARVs leading to stock-outs of commodities.
- Frequent break down of machines.
- Weak ownership of HIV Programmes at facility level.

10.5 Administrative

- Unresolved HR issues such as rationalization of GF staff and absent incentive packages for GoG staff is a dent on staff morale.
- Continued delays in replacement of very old Programme vehicles continues to create a huge maintenance bill.

Conclusion and Way Forward

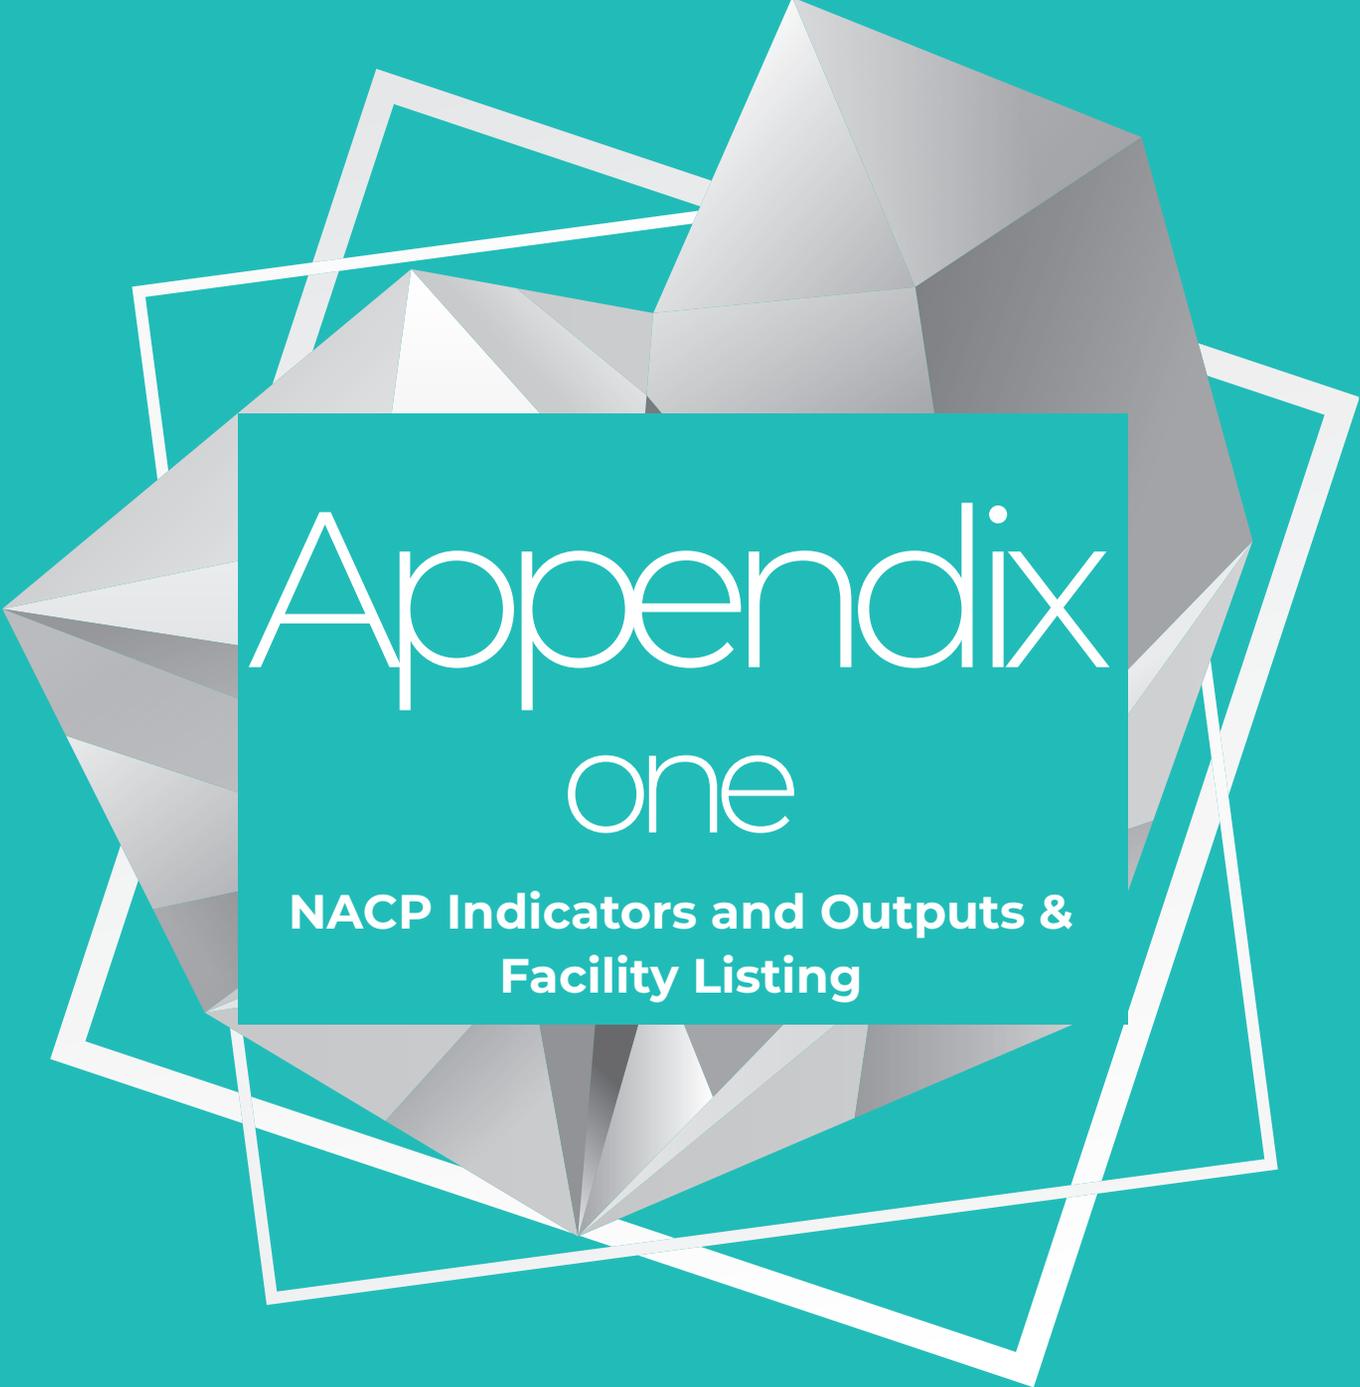

Much more progress has been witnessed in 2018 compared to 2017. The Programme is working assiduously with the Global Fund and partners to revise and mobilize resources for the implementation of the 90/90/90 acceleration plan under NFM 2.

To further accelerate the attainment of our 90-90-90 targets, interventions have been planned to

- Enhance onsite supportive supervision and mentorship.
- Promote greater cooperation with the programme Support Unit of Ghana Health Service and the Resource Mobilisation Unit of the Ministry of Health to address Human Resource and Procurement /Supply Chain bottlenecks.
- Reprogram funds for the 90/90/90 acceleration plan.
- Scale-up DSD implementation and decentralization of ART to PMTCT sites.
- Engage faith-based organizations, CSOs and media houses for greater involvement in prevention campaign.
- Engage Regional Health Directorates and facility heads to support the viral load and early infant diagnosis activities.
- Roll out sample referral system nationwide and continue implementation of the viral load Scale-up plan.
- Continue implementation of the Paediatric Acceleration Plan.
- Build capacity for NACP staff to be able to support e-Tracker functionality and offer intense supportive supervision for HIV e-Tracker.
